**The Musician's Guide
to Aural Skills** Dance
Horizons
This book is about
thinking in music.

Music listeners who understand what they hear are thinking in music. Music readers who understand and visualize what they read are thinking in music. This book investigates the various ways musicians acquire those skills through an examination of the latest research in music perception and cognition, music theory, along with centuries of insight from music theorists,

composers, and performers. Aural skills are the focus; the author also works with common problems in both skills teaching and skills acquisition.

Just as an artist must know every color in order to create a beautiful painting, a musician must know and hear all the notes of the musical "palette" in order to create good music. This ear training method has been developed to teach the student how to hear the way musical sounds are organized within a key. With proper application, the student will be able to: recognize notes without depending on an instrument; identify which notes other

Personal training, theory and exercises produce techniques which are

combined in an integrated craft which may be applied to composition, orchestration, arranging, improvisation and performance. A kind of finishing school for those who wish to pursue a career in composing, orchestrating, arranging or performing. -- The Score, Society of Composers and Lyricists
A myriad of practical information.

Comprehensive ear training, important because aural skills are among the most

overlooked in music education. -- Survey of New Teaching Materials, Jazz Educators journal A synthesis of the author's vast knowledge and his quest to define the question, "How do we hear?" -- ITG Journal A wonderfully systematic approach to ear training . . . neatly designed and structured, it just flows. Direct and easily understood. -- New books, Jazz Educators Journal Bernard Brandt says: "Hearing and Writing Music", by Ron

Gorow, is a superb book. It makes a simple and elegant presentation of the internal process by which we hear sounds and music, how we recognize intervals, chords, melody, harmony, counterpoint, and the timbre of instrumentation/ orchestration, how we can develop the skills of listening, auditory memory and imagination, and how to use these skills to hear and to write down music of any sort. The hallmark of an expert is the ability to explain

the basics of his field as simply as possible. By that standard, Mr. Gorow has proven his expertise in this book. I note that the other reviews, both for Amazon and in musical journals, tend to limit the importance of "Hearing and Writing Music" to ear training. I believe that Mr. Gorow's book is valuable for much more than ear training. I have studied it, and as a result of that study, I believe that my auditory memory and imagination and my abilities in score

reading have improved enormously. Further, I have been able to use the skills in this book to transcribe melodies, harmonies and counterpoint almost effortlessly, both those that I have heard, and those which existed only in my imagination. This book has opened many doors for me. I believe that it can do so for many others.
