Many books on celestial navigation take shortcuts in explaining concepts; incorrect diagrams and discussion are often used for the sake of moving the student along quickly. This book tells the true story--and the whole story. It conveys celestial navigation concepts clearly and in the shortest possible time. It's tailored for

navigation in the GPS age—a time of computers, calculators, and web resources. Although it covers all of the traditional methods of 'working a sight,' the primary thrust is using the (under \$10) scientific calculator. By using equations that you key into your calculator, this book guides you toward a better understanding of the concepts of celestial navigation. You will learn novel ways to plot lines of position, ways to check your sextant accurately by star sights, and how to tell what time it is from a moon sight. The many appendices are a treasure of references and explanations of abstract ideas. Celestial Navigation is a crucial skill for the offshore navigator to know, this book provides the shortest path to that knowledge.

What do we owe Iraq? America is up to its neck in nation building—but the public debate, focused on getting the troops home, devotes little attention to why we are building a new Iraqi nation, what success would look like, or what principles should guide us. *What We Owe Iraq* sets out to shift the terms of the debate, acknowledging that we are nation building to protect ourselves while demanding that we put the interests of the people being governed—whether in Iraq, Afghanistan, Kosovo, or elsewhere—ahead of our own when we exercise power over them. Noah Feldman argues that to prevent nation building from

turning into a paternalistic, colonialist charade, we urgently need a new, humbler approach. Nation builders should focus on providing security, without arrogantly claiming any special expertise in how successful nation-states should be made. Drawing on his personal experiences in Iraq as a constitutional adviser, Feldman offers enduring insights into the power dynamics between the American occupiers and the Iraqis, and tackles issues such as Iraqi elections, the prospect of successful democratization, and the way home. Elections do not end the occupier's responsibility. Unless asked to leave, we must resist the temptation of a military pullout before a legitimately elected government can maintain order and govern effectively. But elections that create a legitimate democracy are also the only way a nation builder can put itself out of business and—eventually—send its troops home. Feldman's new afterword brings the Iraq story up-to-date since the book's original publication in 2004, and asks whether the United States has acted ethically in pushing the political process in Iraq while failing to control the security situation; it also revisits the question of when, and how, to withdraw.

Why should there only be literary scholarship about authors who actually lived, and texts which exist? Where are the articles on Enoch Campion, Linus Withold, Redondo Panza, Darshan Singh, or Heidi B. Morton? That none of these are real authors should be no impediment to interpreting their invented writings. In the first collection of its kind, *The Anthology of Babel* publishes academic articles by scholars on authors, books, and movements that are completely invented. Blurring the lines between scholarship and creative writing, *The Anthology of Babel* inaugurates a completely new literary genre perfectly attuned to the era we live in, a project evocative of Jorge-Louis Borges, Umberto Eco, and Italo Calvino.

Coastal and marine ecosystems, some severely degraded, other

still pristine, control rich resources of inshore environments and coastal seas of Latin America's Pacific and Atlantic margins. Conflicts between the needs of the region's nations and diminishing revenues and environmental quality have induced awareness of coastal ecological problems and motivated financial support for restoration and management. The volume provides a competent review on the structure, processes and function of 22 important Latin American coastal marine ecosystems. Each contribution describes the environmental settings, biotic components and structure of the system, considers trophic processes and energy flow, evaluates the modifying influence of natural and human perturbations, and suggests management needs. Although the focus of the book is on basic ecological research, the results have application for coastal managers.

Mass Transport, Gravity Flows, and Bottom Currents: Downslope and Alongslope Processes and Deposits focuses solely on important downslope and alongslope processes. The book provides clear definitions and characteristics based on soil mechanics, fluid mechanics and sediment concentration by volume. It addresses Slides, Slumps, and Debris Flows, Grain Flows, Liquefied/Fluidized Flows, and Turbidity Currents, Density plumes, Hyperpycnal Flows, the Triggering Mechanisms of Downslope Processes, Bottom Currents, and Soft-Sediment Deformation Structures. The mechanics of each process are described in detail and used to provide empirically-driven categories to help recognize these deposits in the rock record. Case studies clearly illustrate of the problems inherent in recognizing these processes in the rock record, and potential solutions are provided alongside future avenues of research. An appendix also provides step-by-step guidance in describing and interpreting sediments.

- Comprehensively addresses modern downslope and alongslope processes, including definitions and mechanisms
- Provides key criteria for the recognition of depositional facies in the rock record
- Includes case studies to illustrate each downslope and alongslope process
- Identifies key problems and potential solutions for future research
- Uses pragmatic, empirical, data-driven interpretations to revise conventional facies models
