"The approach that has helped  
thousands of learners memorize  
Japanese kanji has been adapted  
to help students with Chinese  
characters. Remembering  
Simplified Hanzi covers the  
writing and meaning of the 1,000  
most commonly used characters  
in the traditional Chinese writing  
system, plus another 500 that are  
best learned at an early stage."

"Of critical importance to the

---

approach found in these pages is the systematic arranging of characters in an order best suited to memory. In the Chinese writing system, strokes and simple components are nested within relatively simple characters, which can, in turn, serve as parts of more complicated characters and so on. Taking advantage of this allows a logical ordering, making it possible for students to approach most new characters with prior knowledge that can greatly facilitate the learning process."--BOOK JACKET.

Mass Transport, Gravity Flows, and Bottom Currents: Downslope and Alongslope Processes and Deposits focuses solely on important downslope and alongslope processes. The book provides clear definitions and characteristics based on soil mechanics, fluid mechanics and sediment concentration by volume. It

addresses Slides, Slumps, and Debris Flows, Grain Flows, Liquefied/Fluidized Flows, and Turbidity Currents, Density plumes, Hyperpycnal Flows, the Triggering Mechanisms of Downslope Processes, Bottom Currents, and Soft-Sediment Deformation Structures. The mechanics of each process are described in detail and used to provide empirically-driven categories to help recognize these deposits in the rock record. Case studies clearly illustrate of the problems inherent in recognizing these processes in the rock record, and

---

potential solutions are provided alongside future avenues of research. An appendix also provides step-by-step guidance in describing and interpreting sediments.

Comprehensively addresses modern downslope and alongslope processes, including definitions and mechanisms Provides key criteria for the recognition of depositional facies in the rock record Includes case studies to illustrate each downslope and alongslope process Identifies key problems and potential solutions for future research Uses pragmatic,

empirical, data-driven interpretations to revise conventional facies models

William Temple Hornaday was the Director of the New York Zoological Society and the nation's leading advocate of wildlife conservation in this era. This unsparing manifesto was written to accompany Hornaday's launching of the Permanent Wildlife Protection Fund; it is thus (in the words of the historian Stephen Fox) both "a campaign tract" and "one of the first books wholly devoted to endangered wild animals" (John Muir and His Legacy: The American Conservation Movement [Boston: Little, Brown and

---

Company, 1981], p. 149). It is also a landmark of conservation history which had a profound effect on the thought of Aldo Leopold, among others. The book surveys the history and causes of wildlife destruction in America and elsewhere, and sets forth a lengthy program to ensure the protection of remaining wildlife for the future, often in militant and moralistic terms. The work also throws light on some of the complexities inherent in the conservation movement at this time: for example, Hornaday accepts the classification of certain bird and mammalian predators as "noxious" or "vermin" and appropriate for destruction (pp. 77-81); there is no criticism here of the massive campaign for the extermination of wolves and coyotes being sponsored at the time by the Bureau of Biological Survey. On a more general level, Hornaday's fulminations against Italian immigrants as incorrigible bird-killers suggest a connection between nativism and conservationism, while his excoriations of market hunters set forth a deeply-rooted class bias shared by many leading conservationists.

Bowker The second volume of this anthology of musical aesthetics proceeds from the rational, common-sense examination of the 18th-century artistic experience to the realm of 19th-century expressiveness. The rational foundation of

aesthetics gave way to an emphasis on an art form's strength of feeling and expressive power, a purity of the creation and the creator. No longer confined to a restricted sense of beauty, music admitted the violent, the enormous and the ugly into its sphere of emotion, now the era of romanticism and Sturm und Drang. These developments are here detailed in the writings of Wackenroder, Herder, Thibaut, Schelling, Hegel, Schopenhauer,

Kirkegaard, Wagner, Hanslick, Ambros, Nietzsche, Spencer, Gurney, and Haussegger. Through them we see the classical province of proportion, educated taste and contained expressiveness recede, and the emotional realism of music come to the fore. Coastal and marine ecosystems, some severely degraded, other still pristine, control rich resources of inshore environments and coastal seas of Latin America's Pacific and Atlantic margins. Conflicts between

the needs of the region's nations and diminishing revenues and environmental quality have induced awareness of coastal ecological problems and motivated financial support for restoration and management. The volume provides a competent review on the structure, processes and function of 22 important Latin American coastal marine ecosystems. Each contribution describes the environmental settings, biotic components and structure of the system, considers trophic processes and energy flow, evaluates

the modifying influence of natural and human perturbations, and suggests management needs.

Although the focus of the book is on basic ecological research, the results have application for coastal managers.
