Lifeguarding Manual Springer Science & Business Media
An exploration, both personal and deeply reported, of how we learn to eat in today's toxic food culture. Food is supposed to sustain and nourish us. Eating well, any doctor will tell you, is the best way to take care of yourself. Feeding well, any human will tell you, is the most important job a mother has. But for too many of us, food now feels dangerous. We parse every bite we eat as good or bad, and judge our own worth accordingly. When her newborn daughter stopped eating after a medical crisis, Virginia Sole-Smith spent two years teaching her how to feel safe around food again — and in the process, realized just how many of us are struggling to do the same thing. The Eating Instinct visits kitchen tables around America to tell Sole-Smith's own story, as well as the stories of women recovering from weight loss surgery, of people who eat only nine foods, of families with unlimited grocery budgets and those on food stamps. Every struggle is unique. But Sole-Smith shows how they're also all products of our modern food culture. And they're all asking the same questions: How did we learn to eat this way? Why is it so hard to feel good about food? And how can we make it better?

While Robotic Process Automation (RPA) has been around for about 20 years, it has hit an inflection point because of the convergence of cloud computing, big data and AI. This book shows you how to leverage RPA effectively in your company to automate repetitive and rules-based processes, such as scheduling, inputting/transferring data, cut and paste, filling out forms, and search. Using practical aspects of implementing the technology (based on case studies and industry best practices), you'll see how companies have been able to realize substantial ROI (Return On Investment) with their implementations, such as by lessening the need for hiring or outsourcing. By understanding the core concepts of RPA, you'll also see that the technology significantly increases compliance – leading to fewer issues with regulations – and minimizes costly errors. RPA software revenues have recently soared by over 60 percent, which is the fastest ramp in the tech industry, and they are expected to exceed $1 billion by the end of 2019. It is generally seamless with legacy IT environments, making it easier for companies to pursue a strategy of digital transformation and can even be a gateway to AI. The Robotic Process Automation Handbook puts everything you need to know into one place to be a part of this wave.
