Manual Handling in Health and Social Care is written for all those involved in the manual handling of adults or children - including those carrying it out, assessors, managers and commissioners. It lays out the current legal requirements in a non-technical way and includes case studies illustrating the law applied in practice, across health, social care and sometimes educational settings. The book applies to England, Scotland, Wales and Northern Ireland. An extended introduction sets out challenges, past, present and future, including safety, balancing risk with duties to meet people's needs, human rights, avoidance of blanket policies, mental capacity, safeguarding, the limited resources of statutory services and single-handed care. It also considers some of the legal implications of increased use of technology (including remote assessment), as well as the "mechanisation" of care and its application to manual handling. The main part of the book is in the form of an A-Z guide, providing quick access to relevant legislation and common law (negligence) rules applying to personal injury cases. It covers also, extensively, judicial review legal challenges to decisions, when people and their families disagree with manual handling decisions that have been made. In addition, relevant ombudsman cases are included. The book will be essential reference for staff and managers in health and social care settings, students, legal professionals and all those working to ensure good practice and compliance with the law.

The Architect's Legal Handbook is the most widely used reference on the law for practicing architects and the established textbook on law for architectural students. Since the last edition of this book in 2010, the legal landscape in which architecture is practised has changed significantly: the long-standing procurement model with an architect as contract administrator has been challenged by the growing popularity of design and build contracts, contract notices in place of certificates, and novation of architect's duties. The tenth edition features all the latest developments in the law which affect an architect's work, as well as providing comprehensive coverage of relevant UK law topics. Key highlights of this edition include: an overview of the legal environment, including contract, tort, and land law; analysis of the statutory framework, including planning law, health and safety, construction legislation, and building regulations in the post-Grenfell legal landscape; procurement, and the major industry construction contract forms; building dispute resolution, including litigation, arbitration,

adjudication, and mediation; key fields for the architect in practice, including architects' registration and professional conduct, contracts with clients and collateral warranties, liability in negligence, and insurance; entirely new chapters on various standard form contracts, architects' responsibility for the work of others, disciplinary proceedings, and data protection; tables of cases, legislation, statutes, and statutory instruments give a full overview of references cited in the text. The Architect's Legal Handbook is the essential legal reference work for all architects and students of architecture.
