Large Print Word Search MIT Press

This book is dedicated to addressing the major challenges in fighting COVID-19 using artificial intelligence (AI) and machine learning (ML) – from cost and complexity to availability and accuracy. The aim of this book is to focus on both the design and implementation of AI-based approaches in proposed COVID-19 solutions that are enabled and supported by sensor networks, cloud computing, and 5G and beyond. This book presents research that contributes to the application of ML techniques to the problem of computer communication-assisted diagnosis of COVID-19 and similar diseases. The authors present the latest theoretical developments, real-world applications, and future perspectives on this topic. This book brings together a broad multidisciplinary community, aiming to integrate ideas, theories, models, and techniques from across different disciplines on intelligent solutions/systems, and to inform how cognitive systems in Next Generation Networks (NGN) should be designed, developed, and evaluated while exchanging and processing critical health information. Targeted readers are from varying disciplines who are interested in implementing the smart planet/environments vision via wireless/wired enabling technologies.

Biographical Memoirs Routledge

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to

read this book.

The Victorian Novel University of Texas Press

These are not mere dreams and visions: these are a calling.Six people. Five mind-numbing visions. Four ancient and mysterious artifacts. Two exotic locations. And one greedy man who will stop at nothing, not even murder, to achieve his goal.Rev. Adam Bridger and his wife, Dr. Rachel Tremaine are once again in the center of an adventure not of their making. And joining them are four total strangers who, along with Rachel, have seen visions that most mortals can't imagine. They have been called on a mission that will forever change the world--if they survive.

Walden Chelsea House Pub

This title examines what it really means to study film, encouraging the reader to question the dominant theories as well as understanding the key approaches to cinema. The book provides an overview of the construction of film studies and examines the application of theories to film texts.

As the number of passenger cars in the world increases daily, so too does Earth's supply of parking spaces. In some cities, parking lots cover more than one-third of the metropolitan footprint--but their design and function has not been rethought since the 1950s. Here, urban designer Eran Ben-Joseph shares a different vision for parking's future--aesthetically pleasing, environmentally and architecturally responsible. He provides a visual history of this often-ignored urban space, introducing us to some of the many alternative and nonparking purposes that parking lots have served. He shows us parking lots that are lushly planted with trees and flowers and beautifully integrated with the rest of the built environment. With purposeful design, Ben-Joseph argues, parking lots could be significant public places, contributing as much to their communities as great boulevards, parks, or plazas.--From publisher description.

Rethinking a Lot Springer

More than a decade after LBJ left office, researchers began to open up the Johnson administration as an important area of scholarly study. Exploring the Johnson Years is an invaluable introduction to that administration and to the LBJ Library's more than thirty million separate documents. The contributors cover every major

aspect of the Johnson presidency, from Vietnam (George C. Herring) to the War on Poverty (Mark I. Gelfand), including coverage of Latin American policy (Walter LaFeber), education (Hugh Davis Graham), civil rights (Steven F. Lawson), the nature of the White House staff (Larry Berman), and Johnson's stormy relationship with the media (David Culbert). The essays illuminate some of the most important files and show how they can be used to further historical understanding of the Johnson years. As a result, scholars who plan to use the library will have a useful guide before they begin, while general readers will be able to discover the ways in which the library's holdings relate to the existing body of literature on the Johnson administration.

Exploring the Johnson Years

These books provide the insights that today's students need to know.

Through My Eyes

Summary Modern C focuses on the new and unique features of modern C programming. The book is based on the latest C standards and offers an up-to-date perspective on this tried-and-true language. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology C is extraordinarily modern for a 50-year-old programming language. Whether you're writing embedded code, low-level system routines, or high-performance applications, C is up to the challenge. This unique book, based on the latest C standards, exposes a modern perspective of this tried-and-true language. About the book Modern C introduces you to modern day C programming, emphasizing the unique and new features of this powerful language. For new C coders, it starts with fundamentals like structure, grammar, compilation, and execution. From there, you'll advance to control structures, data types, operators, and functions, as you gain a deeper understanding of what's happening under the hood. In the final chapters, you'll explore performance considerations, reentrancy, atomicity, threads, and type-generic programming. You'll code as you go with concept-reinforcing exercises and skill-honing challenges along the way. What's inside Operators and functions Pointers, threading, and atomicity C's memory model Hands-on exercises About the reader For programmers comfortable writing simple programs in a language like Java, Python, Ruby, C#, C++, or C. About the author Jens Gustedt is a senior scientist at the French National Institute for Computer Science and Control (INRIA) and co-editor of the ISO C standard.
