During the Progressive Era, a time when the

field of design was dominated almost entirely by men, a largely forgotten activist and teacher named Louise Brigham became a pioneer of sustainable furniture design. With her ingenious system for building inexpensive but sturdy “ box furniture ” out of recycled materials, she aimed to bring good design to the urban working class. As Antoinette LaFarge shows, Brigham forged

a singular career for herself that embraced working in the American and European settlement movements, publishing a book of box furniture designs, running carpentry workshops in New York, and founding a company that offered some of the earliest ready-to-assemble furniture in the United States. Her work was a resounding critique of capitalism ’ s waste and an assertion of new

values in design—values that stand at the heart of today ' s open and green design movements.

A different kind of politics for a new kind of society--beyond work, scarcity and capitalism In the twenty-first century, new technologies should liberate us from work. Automation, rather than undermining an economy built on full employment, is instead the path to a world of liberty, luxury and

happiness—for everyone.

Technological advance will reduce the value of commodities—food, healthcare and housing—towards zero. Improvements in renewable energies will make fossil fuels a thing of the past. Asteroids will be mined for essential minerals. Genetic editing and synthetic biology will prolong life, virtually eliminate disease and provide meat without animals. New horizons beckon. In Fully Automated Luxury Communism, Aaron Bastani conjures a vision of extraordinary hope, showing how we move to energy

abundance, feed a world of 9 billion, overcome work, transcend the limits of biology, and establish meaningful freedom for everyone. Rather than a final destination, such a society merely heralds the real beginning of history.

Martin E. P. Seligman is one of the most decorated and popular psychologists of his generation. When he first encountered the discipline in the 1960s, it was devoted to eliminating misery: the science of how past trauma creates present symptoms. Today, thanks in large part to Seligman's own work pioneering the Positive Psychology

movement, it is ever more focused on the bright side - gratitude, resilience and hope. In this breakthrough memoir, Seligman recounts how he learned to study optimism - including a life-changing conversation with his five-year-old daughter. In wise, eloquent prose, Seligman tells the human stories behind some of his major findings. He recounts developing CAVE, an analytical tool that predicts election outcomes (with shocking accuracy) based on the language used in campaign speeches, and the canonical studies that birthed the theory of learned helplessness - which he

now reveals was incorrect. And he writes at length for the first time about his own battles with depression at a young age. All the while, Seligman works out his theory of psychology, making a compelling and deeply personal case for the importance of virtues like hope, anticipation, gratitude and wisdom for our mental health. You will walk away from this book not just educated but deeply enriched.

This is one of the most significant military books of the twentieth century. By an

outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two

years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

This volume presents an in-depth study of the so-called irregular Past Tense (sing/sang) and Noun Plural (foot/feet) forms with Internal Vowel Alternation (IVA) in English demonstrating that they possess both a fixed phonological and semantic regularity. The innovative sign-oriented analysis and inductive methodology employed in this study are further supported by additional first language acquisition data, experimental studies and historical evidence. The data culled from multiple linguistic anthologies,

dictionaries and thesauri have shown that although the IVA process comprises a relatively small number of nominal and verbal forms in Modern English, IVA, originally, was a prevalent and productive process in Old English, Indo-European and other language families. The results of this empirical study present and introduce a novel classification based on the regular and systematic iconic-phonological and semantic nature of all these diverse IVA processes both nominal and verbal that has been

maintained throughout the history of English. Manual for Spiritual Warfare W. W.
