The Human DNA Manual aims to enlighten and entertain the genetically curious layperson on all aspects of our DNA and genetic code. An introductory section covers the basic concepts of genetics and debunks some of the confusion that stems from associated jargon. A history of DNA discovery explains the role of this molecule-of-inheritance and how it conveys the recipe for life, including how to extract your own DNA at home using every day household items. Discussing the relevance of DNA in the past, present and the future, author Melita Irving also covers the potential influence genes have in driving evolution; the concept of bringing back notable historical species from extinction, and the widespread role of DNA in everyday practices. Current issues, such as genetic conditions and the latest medical breakthroughs in detecting them, forensic science, gene therapy and sequencing are all clearly explained. Finally, the book looks at the future of genes and examine the impact DNA will have on the lives of the next generation — the epigenetics era and potentially heritable consequences of environmental exposures, the contribution of genetic engineering to a functioning society, the concept of gene editing in reproductive medicine, the slippery slope to a 'superhuman' race, and human cloning, as well as the potential for the development of new therapies using gene technology.

In *We Were Adivasis*, anthropologist Megan Moodie examines the Indian state's relationship to "Scheduled Tribes," or adivasis—historically oppressed groups that are now entitled to affirmative action quotas in educational and political institutions. Through a deep ethnography of the Dhanka in Jaipur, Moodie brings readers inside the creative imaginative work of these long-marginalized tribal communities. She shows how they must simultaneously affirm and refute their tribal status on a range of levels, from domestic interactions to historical representation, by relegating their status to the past: we were adivasis. Moodie takes readers to a diversity of settings, including households, tribal council meetings, and wedding festivals, to reveal the aspirations that are expressed in each. Crucially, she demonstrates how such aspiration and identity-building are strongly gendered, requiring different dispositions required of men and women in the pursuit of collective social uplift. The Dhanka strategy for occupying the role of adivasi in urban India comes at a cost: young women must relinquish dreams of education and employment in favor of community-sanctioned marriage and domestic life. Ultimately, *We Were Adivasis* explores how such groups negotiate their pasts to articulate different visions of a yet uncertain future in the increasingly liberalized world.

The aim of this book is to help students write mathematics better. Throughout it are large exercise sets well-integrated with the text and varying appropriately from easy to hard. Basic issues are treated, and attention is given to small issues like not placing a mathematical symbol directly after a punctuation mark. And it provides many examples of what students should think and what they should write and how these two are often not the same.

The Screen Design Manual provides designers of interactive media with a practical working guide for preparing and presenting information that is suitable for both their target groups and the media they are using. It highlights background information and relationships, clarifying them with examples, and encourages the further development of the language of digital media. In addition to the basics of perception and learning psychology, ergonomics, communication theory, imagery research, and aesthetics, the book also considers design navigation and orientation elements. Guidelines and checklists, along with the comprehensive design of the book, support the transfer of information into practice. Frank Thissen teaches multimedia didactics and information design at the University of Applied Sciences in Stuttgart. For over 10 years he has been developing computer based training. He has worked for international companies such as Siemens AG and SAP AG. His research project explores the role of emotion in e-learning > www.frank-thissen.de Key Topics: - Interactive media - Text for the screen - Effective use of pictures - Video, animation, and sound - Screen layout - Orientation and navigation - Interaction - Emotions and metamessages - Intercultural communication
