The most comprehensive source available on medium wave, shortwave, FM broadcast, and television broadcast information, this handbook continues to be the ultimate guide for the serious radio listener. The Science and Practice of Iridology

This book provides an explanation of whole-system structures and relationships rather than isolated circuits or devices. It is committed to showing how the devices of modern electronics are applied in realistic industrial applications, and makes every effort to help you reach the skill level needed for carrying out your job responsibilities. It thoroughly examines a wide variety of systems—from PLCs to industrial robots—and includes a wealth of background information regarding the economic importance and/or environmental impact of the production process involved in the system. A book for the Industrial Electronics Technician or Engineering Technologist who want current information showing how the devices of modern electronics are applied in realistic industrial applications. Edith Percival Springer Science & Business Media Physicists, historians, and anthropologists examine the transition of research in the physical sciences

from the individuals or small groups after World War II, to the huge projects that now involve hundreds of scientists. The 13 papers, from a 1988 workshop at Stanford University, consider the American, European, and Japanese experience. Annotation copyrighted by Book News, Inc., Portland, OR

"Malathion is a registered insecticide and acaricide used on a wide variety of sites including agricultural and non-agricultural sites. In 2018 (the most recent year for which data are available), over 25 000 kg of malathion was sold in Canada. Malathion may be released into surface water or soil as runoff from the application site. Malathion is not usually found in drinking water sources in Canada. Low levels of malathion have been found in several Canadian provinces. The maximum reported concentrations are well below the MAC. Malathion is rarely detected in foods"--Executive summary.

Recently, the Army forecast that it would experience a 4.5-million-acre training land shortfall by 2013 and proposed to purchase additional land adjacent to certain existing training ranges. In response to a congressional request, GAO reviewed the Army's approach for acquiring training land. This report (1) evaluates the Army's approach to the acquisition of training

land, (2) describes the Army's consideration of alternatives and assessment of the environmental and economic effects, and (3) analyzes the Army's effectiveness in communicating its approach for making decisions to pursue these acquisitions before the Office of the Secretary of Defense's (OSD) approval. GAO reviewed the Army strategic plan for training lands and other relevant documents, and focused on all five land acquisitions since 2002 at Fort Irwin, California; three training sites in Hawaii; and the proposed expansion of the Piñon Canyon Maneuver Site in Colorado. GAO recommends that (1) the Army develop and implement a process to update periodically its strategic plan for training ranges to reflect current needs and (2) OSD and the Army jointly review their strategies for communicating major land acquisitions and agree on a common practice that would address concerns about early disclosure and provide the Army and the other services some flexibility to engage the public. DOD generally agrees with the recommendations to view the full product, including and the Army jointly review their strategies for communicating major land acquisitions and agree on a common practice that would address concerns about early disclosure and provide the Army and the other services some flexibility to engage the public.

Modern physical science is constituted by specialized scientific fields rooted in experimental laboratory work and in rational and mathematical representations. Contemporary scientific explanation is rigorously differentiated from religious interpretation, although, to be sure, scientists sometimes do the philosophical work of interpreting the metaphysics of space, time, and matter. However, it is rare that either theologians or philosophers convincingly claim that they are doing the scientific work of physical scientists and mathematicians. The rigidity of these divisions and differentiations is relatively new. Modern physical science was invented slowly and gradually through interactions of the aims and contents of mathematics, theology, and natural philosophy since the seventeenth century. In essays ranging in focus from seventeenth-century interpretations of heavenly comets to twentieth-century explanations of tracks in bubble chambers, ten historians of science demonstrate metaphysical and theological threads continuing to underpin the epistemology and practice of the physical sciences and mathematics, even while they became disciplinary specialties

during the last three centuries. The volume is prefaced by tributes to Erwin N. Hiebert, whose teaching and scholarship have addressed and inspired attention to these issues.
