The Washington Manual of Oncology Wiley-Liss

Neoplasms are common in dogs and cats and it has been estimated that 50% of dogs and cats aged over 10 years die of neoplasia. The demand for treatment of pets with cancer is increasing and seems likely to do so for the foreseeable future as more animals become insured and their treatment costs are covered. The purpose of this book is to provide a basic clinical approach to the diagnosis and treatment of the more common tumours in dogs and cats for the practising veterinary surgeon, undergraduate student and veterinary nurse. It is not intended to be a comprehensive reference book, covering all aspects of veterinary oncology, since several such texts exist. Rather it seeks to provide a core of basic, easily accessible and clinically relevant information on general aspects of veterinary oncology. The first three chapters present general background information on pathogenesis, tumour biology, managing the cancer patient and the most frequently used methods of treatment. Practical details of chemotherapy and guidance on safety are given, as well as coverage of radiotherapy. The remaining chapters then

provide specific information on the epidemiology, aetiology, pathology, presentation, staging, management and prognosis for tumours occurring in the different body systems.

Challenging Concepts in Oncology McGraw Hill Professional

Providing the inside track on how the experts approach and deal with real-world clinical scenarios, Challenging Concepts In Oncology selects twenty-five cases to highlight the important issues relating to common cancers and common cancer-related complications, which do not have simple answers. Each case discusses the presentation of the cancer, its treatment, and an

acute oncological emergency. Written using the UK Oncology curricula for Medical Oncology and Clinical Oncology to support preparation for the MRCP3 examination in Medical Oncology and FRCR, Challenging Concepts in Oncology highlights critical information through the use of boxed features: 'Learning points', 'Clinical tips', and 'Evidence base'. Each chapter has been reviewed by a national or international expert in the field and they have provided an 'Expert commentary', giving a unique insight into how today's opinion leaders confront and deal with the challenges that all oncologists can potentially face on a daily basis. Aimed primarily at specialty trainees and registrars in oncology, this text is also a valuable resource for all health care professionals involved in looking after patients with cancer in primary, secondary, and tertiary care. It is also a fantastic resource for undergraduates who want to find out more about oncology.
