In 1975, Anatoly Karpov was declared chess champion of the world when the eccentric Bobby Fischer declined to defend his title against his Russian challenger. "Tolya" went on to prove that he was no paper tiger over the next

three decades, during which he held the FIDE world championship for 17 years and won more than 160 major chess tournaments, an all-time record. The unique career of the Russian grandmaster can be appreciated from these 100 games, each of which is annotated by Karpov. All chess enthusiasts can profit and learn from these incredibly matches. The Old New Thing SAGE "Humans may not be Earth's most intelligent beings for much longer: the world champions of chess, Go, and Jeopardy! are now all AIs. Given the rapid pace of progress in AI,

many predict that it could advance to human-level intelligence within the next several decades. From there, it could quickly outpace human intelligence. What do these developments mean for the future of the mind? In Artificial You, Susan Schneider says that it is inevitable that AI will take intelligence in new directions, but urges that it is up to us to carve out a sensible path forward. As AI technology turns inward, reshaping the brain, as well as outward, potentially creating machine minds, it is crucial to beware. Homo

sapiens, as mind designers, will be playing with "tools" they do not understand how to use: the self, the mind, and consciousness. Schneider argues that an insufficient grasp of the nature of these entities could undermine the use of AI and brain enhancement technology, bringing about the demise or suffering of conscious beings. To flourish, we must grasp the philosophical issues lying beneath the algorithms. At the heart of her exploration is a sober-minded discussion of what AI can truly achieve: Can robots really be conscious? Can we

merge with AI, as tech leaders like Elon Musk and Ray Kurzweil suggest? Is the mind just a program? Examining these thorny issues, Schneider proposes ways we can test for machine consciousness, questions whether consciousness is an unavoidable byproduct of sophisticated intelligence, and considers the overall dangers of creating machine minds."--Provided by publisher.

Twenty-seven leading artists, writers and academics come together to tackle one of the most drastic urban regeneration programmes in world history - the "Regeneration Supernova" of East London. The impact of global capital and foreign investment on local communities is being felt in major cities across the world. Since the 2012 Olympics was awarded to the British capital, East London has been at the heart of the largest and most all-encompassing top-down urban regeneration strategy in civic history. At the centre of this has been the local government, Newham Council, and their daring proposal: an "Arc of Opportunity" for developers to transform 1,412 hectares of Newham. The proposal was

outlined in a short film, London's Regeneration Supernova, and shown to foreign developers and businesses at the 2010 Shanghai World Expo. While the sweeping changes to East London have been keenly felt by locals, the symbolism and practicalities of these changes - for the local area, and the world alike - are overdue serious investigation. Regeneration Songs is about how places are turned into simple stories for packaged investment opportunities, how people living in those places relate to those stories, and how music and art can render those stories in many different ways. The book will also include a download code to obtain the related musical project, Music for Masterplanning - in which

musicians from East London soundtracked London's Regeneration Supernova - and a 32-page glossy insert detailing the artists involved.

machinery developed for free combinations where the default is that the meaning of an utterance can be predicted from its structure. There is a rich body of primarily descriptive work on MWEs for many European languages but comparative work is little. The volume brings together MWE experts to explore the benefits of a multilingual perspective on MWEs. The ten contributions in this volume look at MWEs in Bulgarian, English, French, German, Maori, Modern Greek, Romanian, Serbian, and Spanish. They discuss prominent issues in MWE research such as classification of MWEs, their formal grammatical modeling, and the description of individual MWE types from the point of view

of different theoretical frameworks, such as Dependency Grammar, Generative Grammar, Head-driven Phrase Structure Grammar, Lexical Functional Grammar, Lexicon Grammar.

The consequences of drug use, whether illicit or prescribed. Consequences that can be enduring, lifelong, even carry through generations. Yet few of us have the time to consider them as we live in the heat of our own daily lives. I have seen this in action, watched events while they happened, seen it unfold, lived through

the results, and unfortunately am observing the ongoing calamities of it all, still today. It is not fun to watch but not mine to fix. I was and am an observer, a recorder, merely that, out of the action, incapable of altering the results. My wife made a great point on this novels subject. Drug use she said is a leveler. It brings people down the lowest common denominator. What a concept! How right on is that statement! Drugs affect the rich, the poor, the famous, and the infamous in every country and nationality on this

earth. If you are on the upscale end drugs keep you there. The users life contribution to humanity is likely to be nothing, but the cost to the user, their family and friends in physical, emotional, and fiscal terms expensive and of course dangerous, because it may also kill you. I have put these observations into this novel hoping that readers can identify with the characters, watch them grow and suffer through the consequences of their actions unaware of the effect of their lives and on others.
