This book compiles research from leading experts in the social, behavioral, and cultural dimensions of sustainability, as well as local and global understandings of the concept, and on lived practices around the world. It contains studies focusing on ways of living, acting, and thinking which claim to favor the local and global ecological systems of which we are a part, and on which we depend for survival. The concept of sustainability as a product of concern about global environmental degradation, rising social inequalities, and dispossession is presented as a key concept. The contributors explore the opportunities to engage with questions of sustainability and to redefine the concept of sustainability in anthropological terms.

The Night Is a Starry Dome FriesenPress Lord Rutherford has said that all science is either physics or stamp collecting. On that basis the study of forest biomass must be classified with stamp collecting and other such pleasurable pursuits. Japanese scientists have led the world, not only in collecting basic data, but in their attempts to systematise our knowledge of forest biomass. They have studied factors affecting dry matter production of forest trees in an attempt to approach underlying physical principles. This edition of Professor Satoo's book has been made possible the help of Dr John F. Hosner and the Virginia Poly technical Institute and State University who invited Dr Satoo to Blacksburg for three months in 1973 at about the time when he was in the final stages of preparing the Japanese version. Since then the explosion of world literature on forest biomass has continued to be fired by increasing shortages of timber supplies in many parts of the world as well as by a need to explore renewable sources of energy. In revising the original text I have attempted to maintain the input of Japanese work - much of which is not widely available outside Japan - and to update both the basic information and, where necessary, the conclusions to keep them in tune with current thinking. Those familiar with

the Japanese original will find Chapter 3 largely rewritten on the basis of new work - much of which was initiated while Dr Satoo was in Blacksburg.

models are becoming increasingly important for the study of language variation. A main challenge of this interdisciplinary field is that linguistics researchers may not be familiar with these helpful computational tools and many NLP researchers are often not familiar with language variation phenomena. This essential reference introduces researchers to the necessary computational models for processing similar languages, varieties, and dialects. In this book, leading experts tackle the inherent challenges of the field by balancing a thorough discussion of the theoretical background with a meaningful overview of state-of-the-art language technology. The book can be used in a graduate course, or as a supplementary text for courses on language variation, dialectology, and sociolinguistics or on computational linguistics and NLP. Part 1 covers the linguistic fundamentals of the field such as the question of status and language variation. Part 2 discusses data collection and pre-processing methods. Finally, Part 3 presents NLP

applications such as speech processing, machine translation, and language-specific issues in Arabic and Chinese.

This book presents eleven case studies of success about Latin America tourism. The cases are embedded in a framework describing the economic and cultural foundations of tourism development in the continent. Mexico, Brazil, Chile and Costa Rica are some of the Latin countries which have become examples and models for touristic development, respect for the environment and social inclusion. The book showcases some of the best practices, along with an analysis of how these projects helped improving the environmental and social surroundings and how return on investments has been ensured. Latin America is shown as an excellent example, with the Gross Domestic Product of the continent expanding intensely in the tertiary sector like leisure, hospitality, travel, tourism, entertainment, gastronomy, events and indoor and outdoor recreation. This book is a valuable resource both for professionals in the tourism industry and for researchers in tourism management.
