world's mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the

first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of

Part II of interest semiconductor the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless

company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate

connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.

was, by general consensus, the pre-eminent business historian of the twentieth century. Through a prodigious body of work, Chandler made the study of the evolution of business enterprise integral to the study of the evolution of economy and society. His work combined detailed historical investigations with grand sociological syntheses. As a result,

---

Chandler's study of the modern business enterprise invited social scientists and business academics as well as historians to contribute to our understanding of a central institution of our time. Chandler revealed how managerial activity was central to the functioning of successful industrial corporations, and hence to the performance of the economy as a whole. This book gathers together contributions from management scholars fundamentally influenced by the work of Chandler to discuss management innovation, the ways in which people who exercise strategic control over the allocation of resources put in place organizational structures that can enable an enterprise to prosper and grow. The volume offers a range of perspectives to examine the challenges that corporate management encounters.

This thesis deals with Rare Earth Elements (REE), especially with neodymium used in permanent magnets, from a very scientific basis by providing basic research data. Despite the fact that REE are

newsworthy and very important elements for a considerable bandwidth of today's technologies, accompanied by the monopolistic supply-situation and Chinese politics, there are inexplicable data discrepancies about REE which have been recognized frequently but usually have not been addressed accordingly. So this analysis started with the hypothesis that the four application areas, namely computer hard disk drives (HDD), mobile phones, wind turbines and e-mobility (automotive traction), account for about 80% of the global annual neodymium-demand. The research methodology was a laboratory analysis of the composition of used magnets for HDDs and mobile phones and a literature and official report analysis of wind turbine and automotive neodymium use. The result was amazing and the hypothesis had to be withdrawn as these four areas

---

only account for about 20% of neodymium use. This result raises some questions concerning actual use and thus potential recycling options.

Following the highly successful "Digital Photography Manual, the complementary "Photography and Your Digital World concentrates on image-editing and image manipulation, to provide a complete resource aimed at all levels of expertise. Highly practical with a results-oriented approach, the book looks at image creation from both a photographic and artistic viewpoint. The creation of images is examined holistically -- all the components of the process, including the original image, the software tools and the user's skill and creativity are examined and seen to contribute to the end

result. Techniques and effects are given in the context of producing exemplary results, and creative solutions are presented for typical imaging problems. Taking a generic approach to software packages wherever possible, the low emphasis on individual software packages will prevent this title from dating quickly, allowing it to retain credibility as new software is developed.

*Made to Break* is a history of twentieth-century technology as seen through the prism of obsolescence. Giles Slade explains how disposability was a necessary condition for America's rejection of tradition and our acceptance of change and impermanence. This book gives us a detailed and harrowing picture of how, by choosing to support ever-shorter product lives, we may well be shortening the future of our way of life as well.

The Economist: Marketing for Growth is a guide to how marketing can and should become a business's most important driver of growth. Marketers play a crucial role in generating revenue, and they can play an equally important role in how revenues translate into profit. They can help a company achieve growth by being smarter or more efficient than its competitors, and do so in a sustainable way. Marketers have their ear to the ground and therefore are often the first to pick up on changing customer needs and behavior, and the forces at play in markets. This informs the development and improvement of products, processes and standard of service. The book explores how to identify the most valuable customers, the most effective ways to drive revenue growth, and the best ways to improve profitability. It combines insight and practical guidance, and is supported by a wealth of hard data and anecdotal evidence from a wide range of business in

This book focuses on various aspects of research on ageing, including in relation to assistive technology; dignity of aging; how technology can support a greater understanding of the experience of physically aging and cognitive changes; mobility issues associated with the elderly; and emerging technologies. The 80+ age group represents an expanding market, with an estimated worth of £ 21.4 billion a year. Everyone is affected by this shift in demographics – we are getting older and may become carers – and we need to prepare ourselves and adjust our surroundings for longer life. Products, services and environments have been

changing in response to the changing population.

Presenting international design research to demonstrate the thinking and ideas shaping design, this book is a valuable resource for designers; product developers; employers; gerontologists; and medical, health and service providers; as well as everyone interested in aging.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-

date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Electronics is an ever-changing field with an entrepreneurial spirit and a rich history, populated by some of the world's most famous companies and personalities. The Business of Electronics details the field's complex ecosystem in all its trials and tribulations. It looks at companies such as Apple, IBM, Samsung, and Nokia, as well as now-extinct companies such as Honeywell Bull (France) and Sinclair Computers (UK) that contributed to technology and business. components; how Nokia started in the timber business; the history of inventors like J.C. Bose, a pioneer in radio communication (who inadvertently made Guglielmo Marconi famous); and why there are numerous companies and creators that never made it or that we have never heard of. This all-encompassing book not only explores the vibrant history of electronics, it uses case studies to examine the companies and people that made history and explain how we ended up where we are today.
