In logistics systems, the issue of planning stability has attracted increased attention and interest in recent years. This is mainly due to an increasing integration of planning systems both within and across companies in supply chain management. The propagation of

adjustments in planning systems first acquired wide attention when MRP systems were employed as standard planning tools for material coordination. Within a rolling horizon framework the MRP application produced considerable planning instability which originates from uncertainties in the planner's exogenous environment as well as from endogenous sources. And we face the same dangers today, though the temptations may be different in degree and detail. By the grace of God, we may avoid a tragic downfall of our own and learn how to use money, sex, and power for the glory of God.
