Gregory Sinclair Hay-Peters is a bit of an upper class twit. Head in the air, full of the classics, Latin and other obscure work. Unfortunately the normal everyday information of life, vital for success in our modern World seemed to have passed him by. His parents acquired a position for him in the city, then they set him up in a luxury apartment. My parents lived in the wide open spaces of Suffolk. I arrived in London with a few pounds in my pocket, looking for work and living in bed-sit-land, looking for work. Fate lent a hand and Greg and I were soon sharing. No-one could possibly have foreseen the trouble we would get into. An amusing take on the shallowness of class. plus a tale of greed overriding common sense, with a couple of murders thrown into the mix for good measure.

The Top Gear Story - The 100% Unofficial Story of the Most Famous Car Show... In The World Haynes Manuals N. America, Incorporated

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
