It's the little things that turn a good digital product into a great one. With this full color practical book, you'll learn how to design effective microinteractions: the small details that exist inside and around features. How can users change a setting? How do they turn on mute, or know they have a new email message? Through vivid, real-world examples from today's devices and applications, author Dan Saffer walks you through a microinteraction's essential parts, then shows you how to use them in a mobile app, a web widget, and an appliance. You'll quickly

discover how microinteractions can change a product from one that's tolerated into one that's treasured. Explore a microinteraction's structure: triggers, rules, feedback, modes, and loops Learn the types of triggers that initiate a microinteraction Create simple rules that define how your microinteraction can be used Help users understand the rules with feedback, using graphics, sounds, and vibrations Use modes to let users set preferences or modify a microinteraction Extend a microinteraction's life with loops, such as "Get data every 30 seconds."

The spread and use of screen-based devices have been steeply increasing with new types of screen-based devices such as tablets, e-readers, and screen-

based wearable devices (e.g., Smartchatches) being introduced to the market. Moreover, traditional screen-based devices such as the television (TV) have been merged with Internet technologies. An industry particularly affected by this increasing use of screen-based devices is the media industry. For instance, consumers frequently use multiple screen-based devices in parallel, switching back and forth between devices. The key objective of this cumulative dissertation is to provide insights into the implications of multi-screen behavior for the media industry. More specifically, we analyze the effect of multi-screen behavior on media usage behavior and on the effectiveness of advertising placed in different media. We conduct empirical analyses to show how consumers' interaction with different screen-based devices influences substantive consumer behavior. The results of this dissertation contribute to previous research by (1) leading to a better understanding of the behavioral outcomes of multi-screen behavior, (2) providing knowledge about the mediation and moderation effects of multi-screen behavior on media usage and advertising effectiveness, and (3) applying novel research methodologies that contribute to the understanding of multi-screen behavior at the individual-level and in a more natural research setting.

As corroborated by the never-sagging and even increasing interest within the last decade, the intuitive attraction of "True 3D" in geodata presentation is well worth covering its current status and recent developments in a compendium like the present one. It covers most aspects of (auto-) stereoscopic representation techniques of both topographic and thematic geodata, be they haptic or not. Theory is treated as well as are many fields of concrete applications. Displays for big audiences and special single-user applications are presented, well-established technologies like classical manual fabrication of landscape reliefs contrast with cutting-edge developments
