The Industrial Electronics Handbook, Second Edition, Industrial Communications Systems combines traditional and newer, more specialized knowledge that helps industrial electronics engineers develop practical solutions for the design and implementation of high-power applications. Embracing the broad technological scope of the field, this collection explores fundamental areas, including analog and digital circuits, electronics, electromagnetic machines, signal processing, and industrial control and communications systems. It also facilitates the use of intelligent systems--such as neural networks, fuzzy

systems, and evolutionary methods--in terms of a hierarchical structure that makes factory control and supervision more efficient by addressing the needs of all production components. Enhancing its value, this fully updated collection presents research and global trends as published in the IEEE Transactions on Industrial Electronics Journal, one of the largest and most respected publications in the field. Modern communication systems in factories use many different--and increasingly sophisticated--systems to send and receive information. Industrial Communication Systems spans the full gamut of concepts that engineers require to maintain a well-designed, reliable communications system that can ensure successful operation of any production process. Delving into the subject, this volume covers: Technical principles Application-specific areas Technologies Internet programming Outlook, including trends and expected challenges Other volumes in the set: Fundamentals of Industrial Electronics Power Electronics and Motor Drives Control and Mechatronics Intelligent Systems

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

This book, a first in its kind, offers a survey of the present state of affairs in media accessibility research and practice. It focuses on professional practices which are relative newcomers within the field of audiovisual translation and media studies, namely, audio description for the blind and visually impaired, sign language, and subtitling for the deaf and the hard-of-hearing for television, DVD, cinema, internet and live performances. Thanks to the work of lobbying groups and the introduction of legislation in some countries, media accessibility is an area that has recently gained marked visibility in our society. It has begun to appear in university curricula across Europe, and is the topic of numerous specialised conferences. The target readership of this book is first and foremost the growing number of academics involved in audiovisual translation at universities? researchers, teachers and students? but it is also of interest to the ever-expanding pool of practitioners and translators, who may wish to improve their crafts. The collection also addresses media scholars, members of deaf and blind associations, TV channels, and cinema or theatre managements who have embarked on the task of making their programmes and venues accessible to the visually and hearing impaired.
