This TC applies to the Active Army, the Army National Guard, the United States Army Reserve and, the United States Air Force Active and Reserve components The term "Driver" is being replaced with the term "Operator" throughout this publication. The term driver implies that all the Soldier must do is drive the vehicle. Today's military operator does considerably more than just drive. The term operator reflects a requirement to master every aspect of the vehicle's capabilities and limitations to include all current sub-components such as technologically advanced communications, navigation, and intercom systems, onboard material handling cranes, self-recovery winches, integrated night-vision devices, weapons support systems, onboard electronic diagnostic systems, and load responsibility. Instructions in this TC will help the wheeled vehicle operator maintain a high degree of driving efficiency. This TC does not restrict its contents to any one particular vehicle. It is a guide to normal everyday operations and to driving under difficult conditions. When more information is needed for a specific vehicle, check the technical manual written for that vehicle.

Automotive Power Transmission Systems Chilton Book Company

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
