This book is the first to address the most urgent issues, combining a solid basic research approach with applied individual and stress issues, including interventions. Throughout, the focus is on our latest knowledge about various

causes of stress and its neuro-cognitive and biological implications. World-renowned authors from Europe as well as the US describe how stress affects the brain of young people as well as adults. They cover the topic from all perspectives, showing how stress affects life in general, from the societal and organizational level to the individual, organ and molecular level. While the book clearly points out stress as a risk factor to health, it also offers a number of evidence-based methods to cope with stress and even ride the positive energy of stress - both as an individual, as well as what managers can do to create a healthy and productive workplace. Written in a reader-friendly and appealing style, the book provides real-life examples from various laboratories, as well as such events as the Volvo Ocean Race, the largest around-the-globe sailing competition. Essential reading for clinicians and biologists, as well as for a wide range of students, including medicine and public health, but also managers and HR staff. With a Foreword by Nobel Laureate Professor Arvid Carlsson (Medicine 2000).

As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. In this seminal work, published by the C.I.A. itself, produced by Intelligence veteran Richards Heuer discusses three pivotal points. First, human minds are ill-equipped ("poorly wired") to cope effectively with both inherent and induced uncertainty. Second, increased knowledge of our inherent biases tends to be of little assistance to the analyst. And lastly, tools and techniques that apply higher levels of critical thinking can substantially improve analysis on complex problems.
