An award-winning scientist offers his unorthodox approach to childrearing: " Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions " (Amy Chua,

author of Battle Hymn of the Tiger Mother). If you ' re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley ' s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You ' ll be laughing and learning at the same time.

Although interest in Spatial Decision Support Systems (SDSS) continues to grow rapidly in a wide range of disciplines, students, planners, managers, and the research community have lacked a book that covers the fundamentals of SDSS along with the advanced design concepts required for building SDSS. Filling this need, *Spatial Decision Support Systems: Principles and Practices* provides a comprehensive examination of the various aspects of SDSS evolution, components, architecture, and implementation. It integrates research from a variety of disciplines, including the geosciences, to supply a complete overview of SDSS technologies and their application from an interdisciplinary perspective. This groundbreaking reference provides thorough coverage of the roots of SDSS. It explains the core principles of SDSS, how to use them in various decision making contexts, and how to design and develop them using readily available enabling technologies and commercial tools. The book consists of four major parts, each addressing different topic areas in SDSS: Presents an introduction to SDSS and the evolution of SDSS Covers the essential and optional components of SDSS Focuses on the design and implementation of SDSS Reviews SDSS applications from various domains and disciplines—investigating current challenges and future directions The text includes numerous detailed case studies, example applications, and methods for tailoring SDSS to your work environment. It also integrates sample code segments

La tesis plantea la problemática existente en la actualización catastral tal como se está realizando actualmente, de forma masiva a todo un término municipal, y sobre todo en la cartografía catastral de rústica en zonas de poco valor, donde ni la administración ni los propietarios tienen excesivo interés. La progresiva pérdida de interés del catastro de rústica como método de recaudación de impuestos frente al catastro de urbana o al IRPF, hace que se planteen reforzar otras aplicaciones multifinalitarias aparte de la impositiva, de forma que se mantenga el interés de la cartografía catastral como una base cartografía de parcelas actualizada y esté disponible para el público, a la vez que se plantean la utilización de nuevas tecnologías en consonancia con la nueva ley del catastro inmobiliario de diciembre de 2002. Las principales tendencias catastrales se basan en utilizar nuevas tecnologías: GPS y SIG, y en la recuperación de costes por parte de la administración. La metodología planteada en la tesis, la actualización discreta integrando técnicas GPS y SIG, supone que el usuario, lo usual es una administración local como un ayuntamiento, pueda disponer de una herramienta que le permita medir pie a tierra y con rigurosidad tanto en precisión de la escala a la que se pretende actualizar (E 1:2.000) como en la exactitud

---

de la georreferenciación de las parcelas para ser integradas dentro de un SIG, esto se consigue con un planteamiento de técnicas GPS que aseguren dichas precisiones como un subsistema de entrada de datos. Los levantamientos con GPS son analizados mediante técnicas SIG respecto a la cartografía catastral existente, de forma de se pueda validar la nueva parcela medida y modificar las vecinas según unos criterios establecidos, esto será el subsistema de análisis de los datos mediante SIG. La metodología propuesta se aplica a la cartografía catastral del T.M. de Níjar, donde se ha inventariado el monte público de dicho termino municipal, unas 3.000 ha. (proyecto financiado por el propio Ayto. y que se ha realizado a lo largo de 3 años). En parcelas muy heterogéneas, tanto en extensión como en condiciones de tomas de datos, zonas montañosas, llanas, etc. Se ha desarrollado una aplicación SIG que contiene el catastro de dicho término municipal y permite realizar la integración de los levantamientos realizados sobre el parcelario existente y modificarlo realizando informes de solapes con las parcelas vecinas. De este modo se contempla que el usuario, en este caso un Ayto., sea el que asuma el coste de la actualización, que esta se haga con rigurosidad técnica según las especificaciones planteadas a priori, con un método pie a tierra, recorriendo las lindes con GPS, e integrado dentro de un sistema de análisis que ayude a la toma de decisiones para modificar el parcelario catastral.

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities. The designations used and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries. The term "country" as used in this publication also refers, as appropriate, to territories or areas. The designations "developed regions" and "developing regions" are intended for statistical convenience and do not necessarily express a judgment about the stage reached by a particular country or area in the development process. Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.
