After Martin Luther, Martin Chemnitz and Johann Gerhard are often recognized as the two greatest theologians of the Lutheran Church. Both men served as Superintendents (Bishops) of the Lutheran Church, and Chemnitz distinguished himself through his labors as one of the authors of the Formula of Concord and through his numerous erudite private writings, including his *Loci Theologici*. Gerhard was renowned throughout the Lutheran world from the 17th century down to the present, in part because of his more 'academic' works such as the *Loci Theologici*, but also because of his devotional works, such as the *Sacred Meditations* and the *Daily Exercise of Piety*. Only one published work was the fruit of the labors of both Chemnitz and Gerhard: *The Harmony of the Four Evangelists*. Chemnitz's incomplete work was continued by his successor to the office of Superintendent of Braunschweig, Polycarp Leyser, but its completion awaited the arrival of a theologian equal to the task of finishing such a monumental undertaking. *The Harmony*, in short, takes the text of all four Gospels and arranges them in chronological order, and then accompanies the complete text with annotations and commentary by Chemnitz, Leyser and Gerhard. Throughout, *The Harmony* benefits from the authors' encyclopedic knowledge of the writings of

the Church Fathers, and their pastoral insights explaining the texts in a way which is extremely beneficial for clergy and laity alike.

In 1940 a British offensive in the Western Desert provoked a major Italian military disaster. By early February 1941 the whole of Cyrenaica had been lost, and German help became necessary to avoid the loss of all of Libya. On 14 February 1941 the first echelons of German troops hurriedly arrived at the port of Tripoli, starting the 27-month German engagement in Northern Africa. This book covers the complex and oft-changing organisation and structure of German forces in North Africa from their first deployment through to the conclusion of the battle of El Alamein, an engagement that irrevocably changed the strategic situation in the Western Desert.

This book describes model-based development of adaptive embedded systems, which enable improved functionality using the same resources. The techniques presented facilitate design from a higher level of abstraction, focusing on the problem domain rather than on the solution domain, thereby increasing development efficiency. Models are used to capture system specifications and to implement (manually or automatically) system functionality. The authors demonstrate the real impact of adaptivity on engineering of embedded systems by providing several industrial examples of the models used in the development of adaptive embedded systems.
