Far from creating a

borderless world, contemporary globalization has generated a proliferation of borders. In *Border as Method*, Sandro Mezzadra and Brett Neilson chart this proliferation, investigating its implications for migratory movements, capitalist transformations, and political life. They explore the atmospheric violence that surrounds borderlands and border struggles across various geographical scales, illustrating their theoretical arguments with illuminating case studies drawn from

Europe, Asia, the Pacific, the Americas, and elsewhere. Mezzadra and Neilson approach the border not only as a research object but also as an epistemic framework. Their use of the border as method enables new perspectives on the crisis and transformations of the nation-state, as well as powerful reassessments of political concepts such as citizenship and sovereignty.

The ideal popular guide to the

key Spaghetti Westerns - mainly the good but also the bad and the ugly - this is an authoritative, entertaining and comprehensive companion to the films that created the mythical Spaghetti West in the most improbable circumstances. Sergio Leone's "Dollars" trilogy is covered, with many more major and minor Spaghetti Westerns, including Sergio Corbucci's "Navajo Joe", Carlo Lizzani's "The Hills Run Red" and Duccio Tessari's "A Pistol for Ringo". This popular guide explores the films through the biographies and filmographies of key personnel, stories of the films' making, their locations and sets, sources, musical scores, detailed cast information, box

office fortunes internationally, with many illustrations, including original posters and stills. *The Order Has Been Carried Out* Osprey Publishing Company Pioneers and leading researchers explain the theory and techniques of using targeted toxins experimentally. The highly successful use of the 192 IgG-saporin and ME20.4-saporin immunotoxins to lesion the cholinergic basal forebrain in order to model the behavior, anatomy, physiology, and pharmacology of

Alzheimer's disease in animals is treated in detail to give a potential user the knowledge to comfortably use the techniques involved. The uses of important new lesioning agents such as anti-DBH-saporin immunotoxin to make remarkably selective lesions of catecholaminergic neurons, hypocretin-saporin that can produce narcoleptic animals, and other saporin conjugates, such as neuropeptide-saporin conjugates for

pain research and cholera toxin B chain-saporin to produce a model of CNS demyelination are explained by experts in the field.

Microfluidics and lab-on-a-chip have, in recent years, come to the forefront in diagnostics and detection. At point-of-care, in the emergency room, and at the hospital bed or GP clinic, lab-on-a-chip offers the potential to rapidly detect time-critical and life-threatening diseases such as sepsis and bacterial meningitis. Furthermore, portable and user-friendly diagnostic platforms can enable disease diagnostics and detection in resource-poor settings where centralised laboratory facilities may not be available. At point-of-use, microfluidics and lab-on-chip

can be applied in the field to rapidly identify plant pathogens, thus reducing the need for damaging broad spectrum pesticides while also reducing food losses. Microfluidics can also be applied to the continuous monitoring of water quality and can support policy-makers and protection agencies in protecting the environment. Perhaps most excitingly, microfluidics also offers the potential to enable entirely new diagnostic tests that cannot be implemented using conventional laboratory tools. Examples of microfluidics at the frontier of new medical diagnostic tests include early

detection of cancers through circulating tumour cells (CTCs) and highly sensitive genetic tests using droplet-based digital PCR.

This Special Issue on

“ Advances in Microfluidics Technology for Diagnostics and Detection ” aims to gather outstanding research and to carry out comprehensive coverage of all aspects related to microfluidics in diagnostics and detection.

The years 1676 and 1774 marked two turning points in the social and legal treatment of madness in England. In 1676, London ’ s Bethlehem Hospital expanded in grand new premises, and in 1774 the Madhouses Act attempted to limit confinement of the insane.

This study explores almost a century of the English history of madness through the texts of five poets who were considered mentally troubled according to contemporary standards: James

Carkesse, Anne Finch, William Collins, Christopher Smart and William Cowper were hospitalized, sequestered or exiled from society. Their works cope with representations of insanity, medical definitions or practices, imputed illness, and the judging eye of the ‘ sane other ’ , shedding new light on the dis/continuities in the notion of madness of this period.

Between 2013 and 2015, the Food and Agriculture Organization of the United

Nations (FAO) and the French that govern sustainable National Institute for Agricultural Research (INRA) undertook a survey of innovative approaches that enable markets to act as incentives in the transition towards sustainable agriculture in developing countries. Through a competitive selection process, 15 cases from around the world provide insights into how small-scale initiatives that use sustainable production practices are supported by market demand, and create innovations in the institutions practices and market exchanges. These cases respond to both local and distant consumers ' concerns about the quality of the food that they eat. The book evidences that the initiatives rely upon social values (e.g. trustworthiness, health [nutrition and food safety], food sovereignty, promotion of youth and rural development, farmer and community livelihoods) to adapt sustainable practices to local contexts, while creating new market outlets for food products. Specifically, private sector and civil society actors are leading partnerships with the public sector to build market infrastructure, integrate sustainable agriculture into private and public education and extension programmes, and ensure the exchange of transparent information about market opportunities. The results are: (i) system innovations that allow new rules for marketing and assuring the sustainable qualities of products; (ii) new forms of organization that

permit actors to play multiple roles in the food system (e.g. farmer and auditor, farmer and researcher, consumer and auditor, consumer and intermediary); (iii) new forms of market exchange, such as box schemes, university kiosks, public procurement or systems of seed exchanges; and (iv) new technologies for sustainable agriculture (e.g. effective micro-organisms, biopesticides and soil analysis techniques). The public sector plays a key role in providing legitimate political and physical spaces for multiple actors to jointly create and share sustainable agricultural knowledge, practices and products.

Textual Explorations General Editors- Mick Short,

The focus of this series is on the stylistic analysis of literary and non-literary texts, and the theoretical issues which such work raises. Textual Explorations will include books that cover studies of literary authors, genres and other groupings, stylistic studies of non-literary texts, translation study, the teaching of language and literature, the empirical study of literature, and corpus approaches to stylistics and literature study. Books in the series will centre on texts written in English. Readership of the series is mainly undergraduate and postgraduate students, although advanced sixth formers will also find the books accessible. The series will be of particular interest to those who study English language, English literature,

text linguistics, discourse analysis and communication studies. *Language & Characterisation- People in Plays & Other Texts* explores how the words of a text create a particular impression of a character in the reader's mind. *Drawing together theories from linguistics, social cognition and literary stylistics*, it is the first book-length study to focus on: the role of language and characterisation in the dialogue of play texts. Containing numerous examples from Shakespeare's

plays, the book also considers a wide range of other genres, including, prose fiction, verse, films, advertisements, jokes and newspapers. *Language and Characterisation* is as practical as it is theoretical and equips readers with analytical frameworks to reveal and explain both the cognitive and the linguistic sides of characterisation. Clear and detailed introductions are given to the theories, and useful suggestions for further analysis are also made at the end of each part of the book. The book will be essential

reading for students and researchers of language, literature and communication. *Moped Repair Handbook* Causey Enterprises, LLC 'Neurocapitalism' takes us on an extraordinarily original journey through the effects that cutting-edge technology has on cultural, anthropological, socio-economic and political dynamics. [Fundamentals of Pediatric Surgery](#) Springer Science & Business Media An easy to use manual that shows you how to maximize

your machine's performance and save money on garage bills. Covers routine maintenance, including tire checks, oil changes, and wheel alignment, as well as basic repairs.

Clinically focused chapters take an evidence-based approach to the management of pediatric surgical patients for residents in training and general surgeons in practice Targets the practitioner who is well-versed in the basic tenets of patient care but who

seeks to benefit from the expertise of a seasoned expert A practical guide in the everyday clinical care of pediatric surgical patients for the advanced reader Legal Informatics Routledge Chemical Analysis of Food: Techniques and Applications reviews new technology and challenges in food analysis from multiple perspectives: a review of novel technologies being used in food analysis, an in-depth analysis of several specific approaches, and an examination of the most innovative applications and future trends. This book won

a 2012 PROSE Award Honorable Mention in Chemistry and Physics from the Association of American Publishers. The book is structured in two parts: the first describes the role of the latest developments in analytical and bio-analytical techniques and the second reviews the most innovative applications and issues in food analysis. Each chapter is written by experts on the subject and is extensively referenced in order to serve as an effective resource for more detailed information. The

techniques discussed range from the non-invasive and non-destructive, such as infrared spectroscopy and ultrasound, to emerging areas such as nanotechnology, biosensors and electronic noses and tongues. Important tools for problem-solving in chemical and biological analysis are discussed in detail. Winner of a PROSE Award 2012, Book: Honorable Mention in Physical Sciences and Mathematics - Chemistry and Physics from the American Association of Publishers Provides

researchers with a single source for up-to-date information in food analysis Single go-to reference for emerging techniques and technologies Over 20 renowned international contributors Broad coverage of many important techniques makes this reference useful for a range of food scientists Catalog. Supplement Springer This book brings together a wide range of sampling methods for investigating different arthropod groups. Each chapter is organized to describe and evaluate the main sampling

methods (field methods, materials and supplies, sampling protocols, effort needed, and limitations); in addition, some chapters describe the specimen preparation and conservation, species identification, data collection and management (treatment, statistical analysis, interpretation), and ecological/conservation implications of arthropod communities. The book aims to be a reference for zoologists, entomologists, arachnologists, ecologists, students, researchers, and for those interested in arthropod science and biodiversity. We hope the book

will contribute to advance knowledge on field assessments and conservation strategies. Arthropods represent the most speciose group of organisms on Earth, with a remarkable number of species and interactions still to be described. These invertebrates are recognized for playing key ecological roles in terrestrial, freshwater and marine ecosystems. Because of the increasing and relentless threats arthropods are facing lately due to a multitude of human induced drivers, this book represents an important contribution to assess their biodiversity and role in ecosystem functioning and

generation of ecosystem services worldwide.

On March 24, 1944, Nazi occupation forces in Rome killed 335 unarmed civilians in retaliation for a partisan attack the day before. Portelli has

crafted an eloquent, multi-voiced oral history of the massacre, of its background and its aftermath.

The moving stories of the victims, the women and children who survived and carried on, the partisans who fought the Nazis, and the common people who lived through the tragedies of the war together paint a many-hued portrait of one of the world's most richly historical cities. *The Order Has Been Carried Out* powerfully relates the struggles for freedom under Fascism and Nazism, the battles for memory in post-war democracy, and the meanings of death and grief in modern society.

This book provides an overview of the physiological basis of lactic acid bacteria and their applications in minimizing foodborne risks, such as pathogens, heavy metal pollution, biotoxin contamination and food based allergies. While highlighting the mechanisms responsible for these biological effects, it also addresses the

challenges and opportunities that lactic acid bacteria represent in food safety management. It offers a valuable resource for researchers, graduate students, nutritionists and product developers in the fields of food science and microbiology.
