This book gives a comprehensive introduction to computer algebra together with advanced topics in this field. It provides a detailed coverage of the mathematics of computer algebra as well as a step-by-step guide to implement a computer algebra system in the object-oriented language C++. The used tools from C++ are introduced in detail. Numerous examples from mathematics, physics and engineering are presented to illustrate the system's capabilities. Computer algebra implementations in LISP and Haskell are also included. In addition, gene expression programming and multiexpression programming with applications to computer algebra are introduced.

This edition of Importing Into the United States contains material pursuant to the Trade Act of 2002 and the Customs Modernization Act, commonly referred to as the Mod Act. Importing Into the United States provides wide-ranging information about the importing process and import requirements. We have made every effort to include essential requirements, but it is not possible for a book this size to cover all import laws and regulations. Also, this publication does not supersede or modify any provision of those laws and regulations. Legislative and administrative changes are always under

consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.

My aim in this book is to give essential advice on all the main aspects of freshwater garden fish ponds. I have tried to include some of the science of ponds while keeping the information easy to understand. Each chapter begins with an outline of the main points of the topic. Each point is then expanded on. My experience with ponds has mainly been in the warm temperate climate in Perth, Western Australia. The principles for fish ponds are similar worldwide but warm temperate climates like that of Perth intensify some of the problems in ponds. This book will therefore be particularly useful to pond owners in sunny climates. The book begins with pond design, starting with the position of the pond in the garden. I discuss the consequences of different pond sizes and depths, and of natural and artificial ponds. I talk about the advantages of a dual pond system. I give guidelines for these and for self-cleaning ponds. I also say why I recommend designing the pond with a sump, overflow, leaf skimmer, and automatic top-up valve. Lastly, I give my colour preference for the pond bottom and sides. Next, I advise on pond construction. Ponds can be built with concrete, bricks, rigid polyethylene, fibreglass or liners. I write about my experiences with ponds made from each of these materials and also my preferences for pipework materials. In the following chapter, I recommend various pumps, filters (including ultraviolet clarifiers), water features, underwater lights and copper ionizers. Choosing the right equipment will give you the right effect for the lowest cost and for the least effort. The chapter on fish gives information on types of fish, especially goldfish and koi. I advise on when a new pond is ready for fish and on the number of fish a pond can support. I give information on the handling, transporting, and feeding of fish, and on diseases and predators. The next chapter delivers general information on water plants, why you should have them and their role in the ecology of the pond. Plants provide shade, oxygen, food, habitat and cover from predators. They filter toxins and excessive nutrients from the water. I give advice on keeping plants, including information on fertilizer and pests. Finally, I give recommendations for pond maintenance including a routine. My advice is directed at pumps, filters, pond cleanliness, exchanging water and maintaining the pH and hardness. The maintenance is largely directed at algae control. I discuss the various forms of nuisance algae and control methods for microalgae, blanket weed, and slime algae. Other advice includes information on water testing and water treatments. Maintaining good water quality is fundamental to the success of any fish pond. "Good" water quality means the water's suitability for its proposed purpose. Water quality is affected by every aspect of a pond, from its design and construction to its pumps, filters and maintenance. Each chapter of this book tells how each aspect of the pond affects the water. Every fish pond is different. The solutions to one pond's problems may be very different to another pond's.

The great thing about being Canadian is simply this: we don't take

ourselves too seriously, which works out pretty well because no one else on the planet takes us seriously, either. If you're reading this book, there's a good chance you're a Canadian. But what does that mean? There are the stereotypical nods, such as politeness and apologizing, but there's so much more! To be honest, you've probably taken part in (or at least talked about) hockey, poutine, curling, canoes, health care, snowshoes, parkas, camping, beer, road work, Canadian Tire, Slurpees, moose, maple syrup, and Tim Hortons in the last 24 hours. "A Hoser's Guide to Canadian History" is your ticket to even more things "Canadian" that you may have missed during your water-cooler discussions, online chats, or your seventeen-hour wait in the local emergency room. As you read this book, you'll discover new and exciting facts about Canada that simply weren't taught in school. As a History teacher, I found the need to spread the unvarnished truth of this great nation's past. People like Sir John "Eh" MacDonald, Tommy Douglas, and Pierre Trudeau all had a distinct impact on this great country of ours, and part of their stories are included in these pages. Even less-famous folks who helped to shape Canada got a mention: John Humphrey, Laura Secord, and Egerton Ryerson. (Yes, "Egerton" is a real name.) Canada has an exciting past, full of events that have brought us to where we are now. Like all countries, we have some things we'd like to forget, but most of those unpleasant moments happened because we had morons in Parliament, something that doesn't happen anymore. Canadians have no need to apologize for being nice, honest, and caring people. So, please enjoy this book, and if you don't, well, I'm sorry.

The design and implementation of the Maple system is an on-going project of the Symbolic Com putation Group at the University of Waterloo in Ontario, Canada. This manual corresponds with version V (roman numeral five) of the Maple system. The on-line help subsystem can be invoked from within a Maple session to view documentation on specific topics. In particular, the command ?updates points the user to documentation updates for each new version of Maple. The Maple project was first conceived in the autumn of 1980, growing out of discussions on the state of symbolic computation at the University of Waterloo. The authors wish to acknowledge many fruitful discussions with colleagues at the University of Waterloo, particularly Morven Gen tleman, Michael Malcolm, and Frank Tompa. It was recognized in these discussions that none of the locally-available systems for symbolic computation provided the facilities that should be expected for symbolic computation in modern computing environments. We concluded that since the basic design decisions for the then-current symbolic systems such as ALTRAN, CAMAL, REDUCE, and MACSYMA were based on 1960's computing technology, it would be wise to design a new system "from scratch". Thus we could take advantage of the software engineering technology which had become available in recent years, as well as drawing from the lessons of experience. Maple's basic features (elementary data structures, Input/output, arithmetic with numbers, and elementary simplification) are coded in a systems programming language for efficiency.

The Batz Guide for Bedside Advocacy, Teaming Up for the Patient Simon and Schuster

The Story: Every day in the United States an estimated 550 people die from preventable medical errors, which is approximately 200,000 people a year, making it the 3rd leading cause of death in the United States. (Healthgrades 2004) On April 14, my mom, Louise Batz, went to have knee replacement surgery. That night, a medical error caused Mom to sustain an injury from which she could not recover. She lost her life eleven days later. The Mission:

The mission of the Louise H. Batz Patient Safety Foundation is to help prevent medical errors by ensuring that patients and families have the knowledge they need to promote a safe hospital experience for their loved ones and to support innovative advancements in patient safety. Our greatest hope is that families, patients, and caregivers will work together as a TEAM to improve safety in our hospitals. The Use of the Guide: Our hope is that you and your family can use this guide in order to improve the quality of your loved one's hospital stay. We hope that by using the guide, you will be better equipped to aid the care team in the reduction of adverse events. Organize your questions and concerns as soon as you learn about an upcoming surgery or procedure. This packet will be useful during pre-surgery appointments, during your time in the hospital, at home post-surgery and for follow up visits and appointments. We encourage you to include personal questions based on feelings or concerns and utilize the questions provided in the Batz Guide for Bedside Advocacy. What's in the Guide: In this guide you will find all sorts of tools that will help you in all aspects of your hospital stay. You will find places to store personal information such as medication logs, the names of your medical team, and surgery summaries; you will find information on who to contact in case of emergency, charts of who is in charge, and who to call to get things done; and you will find advice, definitions, must ask questions, and places to keep and store all of those little details that can and will help keep you or your loved one more safe.

This is the second edition of an inspired manual for psychotherapists, practitioners, healers, and students of emotional, mental, and spiritual healing. It has been updated with an index and additional spiritual insights into the dynamics of sanskara, impressions upon the soul created out of trauma that create our themes and issues in this life. The author describes how the issues we experience in this life are the effect of unfinished and unhealed trauma and wounds of our past lives and this one. He describes how the emotionally charged magnetic fields and signature beliefs created out of these events create our misperceptions of the world, ourselves, and others in relationships. Until now Regression and Past Life Therapy has been a significant tool in bringing emotional and mental healing to individuals. The New Regression Therapy raises that whole modality to a literally Higher Level of healing work, one that is a significant augmentation to the great work of all the pioneers in this field. The New Regression Therapy incorporates additional elements that enhance and broaden the scope and depth of what has been the state of the art in Regression and Past Life Therapy. Most significant among them is the application of Divine Presence from resources found in the Interlife or through Angelic Higher Resources that are brought to the events and fields of attraction where the wounds and signature beliefs have resided. In the second edition further insights into the dynamics of spirit attachment and augmented protocols for the clearing of such attached entities are included.
