 The SQA Advanced Certificate and SQA Advanced Diploma in Marine Engineering provide skills and knowledge that meet the needs of employers. The SQA Advanced Certificate (SCQF level 7) develops knowledge and skills in areas such as propulsion,

auxiliary systems, stability and structure of merchant ships, electro-technology, mechanical principles, and thermodynamics. Marine Engineering | SNAME Thermodynamics. The laws and principles of thermodynamics govern the field of Mechanical Engineering. Whenever an engineer wants to design a motor or system they must take into account laws of energy, motion and friction that will effect how the machine works. Learn more about this field, including the basic laws and rules, and how to apply these rules to the

development of machines and technologies.

states that, as a system undergoes a change of state, energy may cross the boundary as either heat or work, and each may be positive or negative. The net change in the energy of the system will be equal to the net energy that crosses the boundary of the system, which may change in the form of internal energy, kinetic energy, or potential energy.

Law of Thermodynamics. This states that heat always flows from a hot body to a cooler one and is of fundamental significance to liquefied gas carriage. If the temperature of the sea or air is above cargo temperature, heat will flow into the cargo until the temperatures are equal. One purpose of the cargo tank insulation is to reduce the amount of the heat that leaks into the cargo. SQA Advanced

Certificate/Diploma in Marine Engineering - SQA Expansion joints are one of the important joints used in construction, like the roof expansion joints and in the paving slabs. The function of the expansion joints is to endure the stresses produced due to temperature variations. Flexible concrete expansion joints may reduce crack

formation. However, cracks developed may be repaired by using suitable concrete sealer. 17 Importance of Thermodynamics in Marine Engineering ... The current of the ocean is moving because of several factors and there are some importance of thermodynamics in marine engineering in terms of ocean current. One of the importance is to know that the ocean current has a function to
