Artificial neural networks are nonlinear mapping systems whose structure is loosely based on principles observed in the nervous systems of humans and animals. The basic idea is that massive systems of simple units linked together in appropriate ways can generate many complex and interesting behaviors. This book focuses on the subset of feedforward artificial neural networks called multilayer perceptrons (MLP). These are the mostly widely used neural networks, with applications as diverse as finance (forecasting), manufacturing (process control), and science (speech and image recognition). This book presents an extensive and practical overview of almost every aspect of MLP methodology, progressing from an initial discussion of what MLPs are and how they might be used to an in-depth examination of technical factors affecting performance. The book can be used as a tool kit by readers interested in applying networks to specific problems, yet it also presents theory and references outlining the last ten years of MLP research.

In the spring of 2011, a diverse group of scientists gathered at Cornell University to discuss their research into the nature and origin of biological information. This symposium brought together experts in information theory, computer science, numerical simulation, thermodynamics, evolutionary theory, whole organism biology, developmental biology, molecular biology, genetics, physics, biophysics, mathematics, and linguistics. This volume presents new research by those invited to speak at the conference. The contributors to this volume use their wide-ranging expertise in the area of biological information to bring fresh insights into the many explanatory difficulties associated with biological information. These authors raise major challenges to the conventional scientific wisdom, which attempts to explain all biological information exclusively in terms of the standard mutation/selection paradigm. Several clear themes emerged from these research papers: 1) Information is indispensable to our understanding of what life is; 2) Biological information is more than the material structures that embody it; 3) Conventional chemical and evolutionary mechanisms seem

insufficient to fully explain the labyrinth of information that is life. By exploring new perspectives on biological information, this volume seeks to expand, encourage, and enrich research into the nature and origin of biological information.

Giddens's analysis of the writings of Marx, Durkheim and Weber has become the classic text for any student seeking to understand the three thinkers who established the basic framework of contemporary sociology. The first three sections of the book, based on close textual examination of the original sources, contain separate treatments of each writer. The author demonstrates the internal coherence of their respective

contributions to social theory. The concluding section discusses the principal ways in which Marx can be compared with the other two authors, and discusses misconceptions of some conventional views on the subject.

One of the prime purposes of accounting is to communicate and yet, to date, this fundamental

aspect of the discipline has received relatively little attention. The Routledge Companion to Accounting Communication represents the first collection of contributions to focus on the power of communication in accounting. The chapters have a shared aim of addressing the misconception that accounting is a purely technical, number-based discipline by highlighting the use of narrative, visual and technological methods to communicate accounting information. The contents comprise a mixture of reflective overview, stinging critique, technological exposition, clinical analysis and practical advice on topical areas of interest such as: The miscommunication that preceded the global financial crisis The failure of sustainability reporting The development of XBRL How to cut clutter With an international coterie of contributors, including a communication theorist, a Big Four practitioner and accounting academics, this volume provides an eclectic array of expert analysis and reflection. The contributors reveal how accounting communications represent, or misrepresent, the financial affairs of entities, thus presenting a state-of-the-art assessment on each of the main facets of this important topic. As such, this book will be of interest to a wide range of readers, including: postgraduate students in management and accounting; established researchers in the fields of both accounting and communications; and accounting practitioners.

'In the beginning there was Syd Field. Then came McKee and Vogler. Now there is Dara Marks. Marks has long ranked among the top screenwriting theorists, now her teachings are available to everyone.' Creative Screenwriting 'Offers fresh insights into screenwriting structure, enabling writers to hone their craft and elevate their art.' Prof Richard Walter, UCLA Screenwriting Chairman 'This is a book you can read with each script you write, as both guide and inspiration.' Lisa Loomer, Screenwriter, Girl Interrupted and The Waiting Room 'Destined to become a classic.' Scriptwriter magazine Inside Story offers the most important advancement in screenwriting theory to come along in years. This innovative method for structuring a screenplay is designed to keep writers focused on the heart and soul of their story so that plot, character and theme create a unified whole. Marks' method offers an easy to follow template for story construction, helping the writer to identify what the story is actually about: the thematic intention. It then uses the internal character development of the protagonist as a vehicle to drive the thematic intention and the line of action within the story. Neural Smithing Jossey-Bass

Chinese: A Comprehensive Grammar is a complete reference guide to Chinese grammar which presents a fresh and accessible description of the language, concentrating on the real patterns of use in modern Chinese. The volume is organized to promote a thorough understanding of Chinese grammar. It offers a stimulating analysis of the complexities of the language and provides full and clear explanations.
