Continuation of the reference work that originated with Robert Dodsley, written and published each year, which records and analyzes the year's major events, developments and trends in Great Britain and throughout the world. After 1815 the usual form became a number of chapters on Great Britain, paying particular attention to the proceedings of Parliament, followed by chapters covering other countries in turn, no longer limited to Europe. The expansion of the History came at the expense of the sketches, reviews and other essays so that the nineteenth-century publication ceased to have the miscellaneous character of its eighteenth-century forebear, although poems continued to be included until 1862, and a small number of official papers and other important texts continue to be reproduced.

This book details the evolution of General George Marshall's relationship with the atomic bomb—including the Manhattan Project and the use of atomic weapons on Japan—as it emerged as the ultimate weapon of mass destruction. The atomic bomb is not only the most powerful weapon ever used in the history of warfare: it is also the most significant in terms of its long-term impact on U.S. military power and policy, and as the reason behind the conflict that raged for four decades without actually happening—the Cold War. General George C. Marshall played an instrumental role in the development and use of the atomic bomb in World War II as well as in issues involving nuclear weapons in the post-World War II period. This book tells the story of Marshall's experience with the atomic bomb from his early skepticism of its effectiveness as a weapon, to his oversight of its development and deployment against Japan in World War II, to his recognition of the bomb as a weapon of such dire consequence that it should never be used again. Intended for a general audience as well as scholars with specific knowledge about the subject matter, this book presents a cohesive account of General Marshall's involvement with nuclear weapons and atomic power as Army chief of staff during World War II and as secretary of state and secretary of defense in the early years of the Cold War. Marshall's involvement with the use of nuclear weapons is set in the context of the Allies' efforts to force Japan to surrender and the initiation of the Cold War. Readers will gain insight into Marshall's quest for obtaining a Japanese surrender; his views on the use of the atomic bomb on Japan versus the use of conventional weapons, including fire bombing or poison gas; his interactions with Roosevelt and Truman on nuclear issues; and Marshall's diplomatic skillfulness in dealing with the issues surrounding the control and use of nuclear weapons as secretary of state and secretary of defense in the post-World War II era. These included consideration of the use of the atomic bomb during the Berlin crisis and the Korean war.

This is a major new handbook that covers hundreds of subjects that cross numerous industry sectors; however, the handbook is heavily slanted to oil and gas environmental management, control and pollution prevention and energy efficient practices. Multi-media pollution technologies are covered: air, water, solid waste, energy.

Students, technicians, practicing engineers, environmental engineers, environmental managers, chemical engineers, petroleum engineers, and environmental attorneys are all professionals who will benefit from this major new reference source. The handbook is organized in three parts. Part A provides an extensive compilation of

abbreviations and concise glossary of pollution control and engineering terminology. More than 400 terms are defined. The section is intended to provide a simple look-up guide to confusing terminology used in the regulatory field, as well as industry jargon. Cross referencing between related definitions and acronyms are provided to assist the user. Part B provides physical properties and chemical safety information. This part is not intended to be exhaustive; however it does provide supplemental information that is useful to a number of the subject entries covered in the main body of the handbook. Part C is the Macropedia of Subjects. The part is organized as alphabetical subject entries for a wide range of pollution controls, technologies, pollution prevention practices and tools, computational methods for preparing emission estimates and emission inventories and much more. More than 100 articles have been prepared by the author, providing a concise overview of each subject, supplemented by sample calculation methods and examples where appropriate, and references. Subjects included are organized and presented in a macropedia format to assist a user in gaining an overview of the subject, guidance on performing certain calculations or estimates as in cases pertinent to preliminary sizing and selection of pollution controls or in preparing emissions inventories for reporting purposes, and recommended references materials and web sites for more in-depth information, data or computational tools. Each subject entry provides a working overview of the technology, practice, piece of equipment, regulation, or other relevant issue as it pertains to pollution control and management. Cross referencing between related subjects is included to assist the reader to gain as much of a practical level of knowledge.
