The Constitution of India is the supreme law of land. The document lays down extensively the framework demarcating fundamental political code, structure, procedures, powers, and duties of government institutions and sets out fundamental rights, directive principles, and the duties of citizens. It is the longest written constitution of any country on earth. B. R. Ambedkar, chairman of the drafting committee, is widely considered to be its chief

architect. Constitution is a living document, an instrument which makes the government system work. Its flexibility lies in its amendments. In this edition, the text of the Constitution of India has been brought up-to-date by incorporating therein all amendments made by Parliament up to and including the Constitution (One Hundredth Amendment) Act, 2015 which contains details of acquired and transferred territories between the Governments of India and Bangladesh and the same has been included in Annexure. Businesses today are faced with avalanche of information. There is need to effectively manage information to serve customers better. In today's highly competitive environment, businesses need to be able to organize and coordinate their information so that a single view of information is maintained by all the service channels. Information management can help to understand customers' wants and needs and integrate such in product design. It helps to manage inventory and

reduces both cost and the cycle time to introduce new products to the marketplace. Time-to-market is a critical issue in achieving competitiveness and without the availability of timely and accurate information; it will not be possible to respond proactively to the changing market environment. This book is about ERP and Supply Chain Management. ERP is the short form for Enterprise Resource Planning. The aim of ERP is to integrate the functions of the different business units and departments such as finance, operations, accounting and human resources. This integration is necessary to organize and coordinate information that may be scattered in different departments and making them available in an organized format to the different decision centers where they may be needed. Through this integrative approach, the different functional units of the business are able to share a common database, exchange information, and have consistent view of their operations. This consistent view is also presented to the customer thus improving the quality of customer service. With the integration of the information system, the different functional departments work together to achieve common organizational goals and objectives. Without such integration, common customer services such as order processing would be difficult to track and inconsistent information may be relayed by the different departments to the customer. Supply chain management is an integral aspect of ERP. Businesses today focus on their core competence. It is no longer technically and economically feasible to focus on all activities. Rather, certain activities may be shifted to partners or vendors that have core competence in such areas. Mercedes Benz may find it better to subcontract its radios to Bose while focusing on its car

designing. Yet, these two companies may need to share key information on customers' wants and needs as well as information on product designs. Integrating a supplier into the common database helps in providing quality products and services that will satisfy the needs of the customer. Information technology plays a critical role in effective development of ERP system. As many businesses develop online marketplace, it becomes even more important to develop a single view of transactions to all value chain partners including customers, manufacturer, suppliers and other vendors. This book therefore adopts a focus on ERP and Supply Chain Management to develop better plans to better serve the customer. It adopts a management and a systemic perspective of these issues and does not deal with the software aspects of ERP. The focus is on the fundamentals rather than on the advanced issues. The book is intended to help managers, executives, and students to understand the basic concepts of ERP and Supply Chain Management.

Conflict over information has become a central part of twenty-first century politics and culture. The sites of struggle are numerous, the actors beyond count. Currents of liberation and exploitation course through the debates about Snowden and surveillance; Anonymous and the 'Arab Spring'; search engines and social media. In Information Politics, Tim Jordan identifies all these issues in relation to a general understanding of the nature of an information politics that emerged with the rise of mass digital cultures and the internet. He also locates it within a field of rebellion and liberation that is populated by many interwoven social and political conflicts including gender, class and ecology. The exploitations both facilitated by, and contested through, increases in

An extraordinary and rare insight into how a few determined entrepreneurs created an icon... - C. K. Prahalad The targets were stupendous and considered unachievable by almost everyone. Slightly over two years to find a suitable partner, finalize all legal documentation, get governmental approval to these agreements as well as to the investment proposals, build a factory, develop a supplier base to meet localization regulations, create a sales and service network, and develop and launch a people's car that would sell 100,000 a year, in a sector where Indian expertise was limited. And to do this as a public sector company, having to follow all governmental systems and procedures, and having to please both its masters in the government and Suzuki

Motor Corporation. However, the Maruti project succeeded, and in ways that were unimaginable in 1983. The car revolutionized the industry and put a country on wheels. Suddenly, ordinary middle-class men and women could aspire to own a reliable, economical and modern car, and the steep sales targets were easily met. Twenty-six years later, the company, now free of government controls and facing competition from the world's major manufacturers who have entered the Indian market, still leads the way. Not only that, cars made by Maruti can be seen in all continents. By any yardstick, it is an incredible story, involving grit, management skill and entrepreneurship of a high order. R.C. Bhargava, who was at the helm of the company, and is currently its chairman, co-writing with senior journalist and author Seetha, shows how it was done in this riveting account of a landmark achievement.

This book presents the proceedings of the 4th International Conference on Internet of Things and Connected Technologies (ICIoTCT), held on May 9 – 10, 2019, at Malaviya National Institute of Technology (MNIT), Jaipur, India. The Internet of Things (IoT) promises to usher in a revolutionary, fully interconnected “smart” world, with relationships between objects and their environment and objects and people becoming more tightly intertwined. The prospect of the Internet of Things as a ubiquitous array of devices bound to the Internet could fundamentally change how people think about what it means to be “online”. The ICIoTCT 2019 conference provided a platform to discuss advances in Internet of Things (IoT) and connected technologies, such as various protocols and standards. It also offered participants the opportunity to interact with experts through keynote talks, paper presentations and discussions, and as such stimulated research. With the recent adoption of a variety of enabling wireless communication technologies, like RFID tags, BLE, ZigBee, embedded sensor and actuator nodes, and various protocols such as CoAP, MQTT and DNS, IoT has moved on from its infancy. Today smart sensors can collaborate directly with machines to automate decision-making or to control a task without human involvement. Further, smart

technologies, including green electronics, green radios, fuzzy neural approaches, and intelligent signal processing techniques play an important role in the development of the wearable healthcare devices.

The utopian promise of the internet, much talked about even a few years ago, has given way to brutal realities: coltan mines in the Congo, electronics factories in China, devastated neighborhoods in Detroit. *Cyber-Proletariat* shows us the dark-side of the information revolution through an unsparing analysis of class power and computerization. Dyer-Witford investigates how technology facilitates growing polarization between wealthy elites and precarious workers. He reveals the class domination behind everything from expanding online surveillance to intensifying robotization. At the same time, he looks at possibilities for information technology within radical movements.

manufacturing/processing/assembly process, and procurement activity in such a way that customers are serviced at a higher level yet lower cost. Overall this has introduced a new breed of management in a computer literate environment operating in a global infrastructure. Addressing this complex topic, Alan Branch's new book fulfills two clear objectives: to provide a concise, standard work on the subject, written in lucid language that embraces all the ingredients of a notoriously complex subject with a strategic focus to extol best practices and focus on all areas of the industrial and consumer sectors and their interface with changing international market needs. Until now, no book dedicated to international logistics and supply chain management was available. Practically-oriented, this book features numerous case studies and diagrams from logistic operators. An ideal resource for management students, academics and managers who need a succinct treatment of global operations, Branch's book skillfully illustrates his ideas in practice. It is a book which should be on the shelf of every practitioner and student of the subject. Also available from Routledge: Elements of Shipping, Eighth Edition, Alan E. Branch.
