THE MASS-TRANSFER OPERATIONS A substantial number of the unit operations of chemical engineering are concerned with the problem of changing the compositions of solutions and mixtures through methods not necessarily involving chemical reactions. Usually

these operations are directed toward separating a substance into its component parts.

Mass-Transfer Operations, 3rd Edition: Robert Ewald ...

In industrial processes, mass transfer operations include separation of chemical components in distillation columns, absorbers such as scrubbers or stripping, adsorbers such as activated carbon beds, and liquid-liquid extraction. Mass transfer is often coupled to additional transport processes, for instance in industrial cooling towers. These towers couple heat transfer to mass transfer by allowing hot water to flow in contact with air.

Mass transfer - Wikipedia

chemical reaction and physical separation are coupled in a single unit operation. Mass transfer operations involving the diffusion of the component to be separated through a stationary phase (unidirectional mass transfer) include: gas absorption, liquid

extraction, adsorption, and ion exchange.
