Following his well-received books in this ‘In Detail’ series on the Ferguson TE20 and the Massey Ferguson 35 & 65 models, author Michael Thorne turns his attention to the outstandingly successful and well-loved 100 Series of tractors. Of the 100 range, the most popular was and remains the 135. Half a million 135s were built at Massey Ferguson’s factory in Coventry alone, with production overseas on top of this figure. Another big success was the larger, more powerful 165, with nearly 200,000 sold.

This model, like the 135, is among the most popular and sought-after classic tractors today, although many 135s and 165s are still in active use around the world, in spite of their age. The 100 range included a great number of other models, and in addition to the 135 and 165, which are given in-depth treatment here, important models described in detail are the 130, 148 Super-Spec, 168, 175, 185 and 188 Super-Spec. There is an extensive chapter on the implements available for the range, and another on conversions. Featuring 290 illustrations including detailed specially-commissioned colour photography of outstanding examples of 100 Series tractors, Massey Ferguson 100 Series In Detail offers an unrivaled store of knowledge for the owners and enthusiasts who care passionately about these tractors, and serves as a tribute to the people who made them.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that

shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

This bulletin provides principles, practices and procedures for testing machines and also determines aspects of a machine's performance that can be evaluated. It is directed towards those involved in the evaluation of machinery, and primarily towards users on small farms. Evaluation of farm equipment may be appropriate at any stage in its development, from first prototype to batch and series production.
