Production IBM Redbooks	pervasive performance	straightforward
This IBM® Redbooks® publication provides advice and technical information about optimizing and tuning application code to run on systems that are based on the IBM POWER7® and POWER7+™ processors. This advice is drawn from application optimization efforts across many different types of code that runs under the IBM AIX® and Linux operating systems, focusing on the more	opportunities that are identified, and how to capitalize on them. The technical information was developed by a set of domain experts at IBM. The focus of this book is to gather the right technical information, and lay out simple guidance for optimizing code performance on the IBM POWER7 and POWER7+ systems that run the AIX or Linux operating systems. This book contains a large amount of	performance optimization that can be performed with minimal effort and without previous experience or in-depth knowledge. This optimization work can: Improve the performance of the application that is being optimized for the POWER7 system Carry over improvements to systems that are based on related processor chips Improve performance on other platforms The audience of this book is those personnel who are

responsible for performing migration and implementation activities on IBM POWER7-based servers, which includes system administrators, system architects, network administrators, information architects, and database administrators (DBAs). This hand book provides detailed
information on the nutrient
composition of a wide range of
common Indian foods available in
different parts of India. It also
includes a write-up on the basic
aspects of human nutrition. The
nutrient composition covers 600
foods, both familiar and less
familiar. Only those foods with
confirmed scientific names have
been included. Besides English,
names of the foods in several
Indian languages are also given
for easy identification by the user.
The data on nutrient composition
of foods given in this book are

entirely based on Indian work, mostly carried out at the National Institute of Nutrition, Hyderabad, and other research Institutes and University laboratories. An attempt has been made to give a simple account of current concepts of nutritional principles, nutritional chemistry of major food groups and nutritional deficiency diseases, prevalent in the country. This book should be useful to the lay public as well as to the health professionals. Up to date information on nutritional requirement and Recommended Dietary Allowances and Guidelines for formulation of nutritionally adequate diets are also given, for the benefit of professionals and informed public.

This IBM® Redbooks® publication describes how to build production topologies for IBM Business Process Manager V8.0. This book is an update of the existing book IBM Business Process Manager V7.5 Production Topologies, SG24-7976. It is intended for IT Architects and IT Specialists who want to understand and implement these topologies. Use this

book to select the appropriate production topologies for an environment, then follow the step-by-step instructions to build those topologies. Part 1 introduces IBM Business Process Manager and provides an overview of basic topology components, and Process Server and Process Center. This part also provides an overview of the production topologies described in this book, including a selection criteria for when to select a topology. IBM Business Process Manager security and the

presentation layer are also addressed in this part. Part 2 provides a series of step-by-step instructions for creating production topology environments by using deployment environment patterns. This process includes topologies that incorporate IBM Business Monitor. This part also describes advanced topology topics. Part 3 covers post installation instructions for implementing production topology environments such as configuring IBM Business Process Manager to use IBM

HTTP Server and
WebSphere® proxy server.

In this IBM® Redbooks®
publication, we give an overview
of different data management
topics related to a typical SAP®
data center. The intrinsic
functionality of SAP is not
designed to completely handle all
the tasks of a data center by itself,
but the SAP system offers several
interface possibilities to attach
external tools to it to accomplish
this task. We explain SAP basic
concepts and the issues with SAP
data management. We introduce
Tivoli® Storage Manager and all
of its products that are related to

SAP data management. We
provide some comparison between
database backup and recovery
tools. Finally, we discuss data
archiving using IBM DB2®
CommonStore for SAP, and
discuss high availability
requirements and disaster
recovery considerations. The
second part of this book discusses
a practical implementation of SAP
backup and recovery with Tivoli
Storage Manager. We implement
this setup on two separate SAP
systems: one running DB2 and the
other running Oracle® database.
We also implement LAN-free
backup and FlashCopy®
scenarios. In the sample
implementation section, we show
many different tasks, such as

backup and restore, database
recovery, backup monitoring, and
tuning. We also cover some
advanced backup/availability
considerations, such as split
mirror backup and standby
databases. This book helps
individuals that operate an SAP
environment to devise a strategy
for a sound and comprehensive
data backup solution using the
IBM Tivoli Storage Management
product family.

Adobe Acrobat DC Classroom in a Book, Third Edition, is the most thorough and comprehensive way for you to learn how to reliably create, edit, share, and sign PDF documents and forms with Adobe Acrobat DC. Each of the 13 lessons in this step-by-step, project-based guide contains a project that builds on your growing knowledge of the program, while end-of-chapter review questions reinforce each lesson. This cross-platform (Mac and Windows) book shows you how to collaborate effectively through electronic reviews, easily work with PDFs

across multiple platforms and devices (including via the Adobe Document Cloud service), and speed up your production and business task workflows with Acrobat DC. You will learn how to easily convert files from any application to PDF and how to directly edit text and images in PDF documents. You'll also learn how to build PDF forms, and to speed up business workflow by gathering feedback and approval using new shared document review features. And you'll learn how to create interactive forms and track responses within Acrobat,

add signatures and security to PDF files, work with companion Acrobat apps, and much more. All of the project files used in the book's lessons are available for download.

Ranger Handbook (Large Format Edition) IBM Redbooks

Across numerous vertical industries, enterprises are challenged to improve processing efficiency as transactions flow from their business communities to their internal systems and vice versa, simplify management and expansion of the external communities, accommodate customer and supplier preferences, govern the flow of information, enforce policy and

standards, and protect sensitive information. Throughout this process, external partners must be on-boarded and off-boarded, information must flow across multiple communications infrastructures, and data must be mapped and transformed for consumption across multiple applications. Some transactions require synchronous or real-time processing while others are of a more periodic nature. For some classes of customer or supplier, the enterprise might prefer a locally-managed, on-premise solution. For some types of communities (often small businesses), an as-a-Service solution might be the best option. Many large enterprises combine

the on-premise and as-a-Service approach to serve different categories of business partners (customers or suppliers). This IBM® Redbooks® publication focuses on solutions for end-to-end integration in complex value chains and presents several end-to-end common integration scenarios with IBM Sterling and IBM WebSphere® portfolios. We believe that this publication will be a reference for IT Specialists and IT Architects implementing an integration solution architecture involving IBM Sterling and IBM WebSphere portfolios.

Backing up SAP software environments is increasingly challenging in today's 24x7 enterprises. Even more challenging is restoring these environments. Applications and databases grow ever larger, putting increasing strain on the management infrastructure. Using hardware-assisted copy mechanisms to perform fast backups and restores is one way to address these issues. Tivoli Storage Manager, along with associated products, allows you to

leverage FlashCopy to perform fast backups, almost "instant" restores, as well as database cloning for testing and other purposes. These applications are fully integrated with SAP software in DB2 UDB and Oracle environments, providing reliable, intelligent techniques for data protection. This IBM Redbooks publication will help you plan, configure, and run IBM Tivoli Storage Manager for Advanced Copy Services and associated applications in your SAP

software environments.

This IBM® Redbooks® publication describes the new channels and containers support in IBM Customer Information Control System (CICS®) Transaction Server V5.2. The book begins with an overview of the techniques used to pass data between applications running in CICS. This book describes the constraints that these data techniques might be subject to, and how a channels and containers solution can provide solid advantages alongside these techniques. These capabilities enable

CICS to fully comply with emerging technology requirements in terms of sizing and flexibility. The book then goes on to describe application design, and looks at implementing channels and containers from an application programmer point of view. It provides examples to show how to evolve channels and containers from communication areas (COMMAREAs). Next, the book explains the channels and containers application programming interface (API). It also describes how	this API can be used in both traditional CICS applications and a Java CICS (JCICS) applications. The business transaction services (BTS) API is considered as a similar yet recoverable alternative to channels and containers. Some authorized program analysis reports (APARs) are introduced, which enable more flexible web services features by using channels and containers. The book also presents information from a systems management point of view, describing the systems management and	configuration tasks and techniques that you must consider when implementing a channels and containers solution. The book chooses a sample application in the CICS catalog manager example, and describes how you can port an existing CICS application to use channels and containers rather than using COMMAREAs.
