Butterworth-Heinemann

Launched in 1958, as the successor to the ubiquitous Ferguson TE20, the Masey-Ferguson 35 was a product of the merger of Massey-Harris and Ferguson. It incorporated numerous improvements and new features and became massively popular worldwide. Its companion, the 65 model, was introduced shortly afterwards and was a larger tractor, offered with the revolutionary Multi Power system that gave 12 forward and four reverse gears. Durable and versatile, these tractors are still a practical proposition today, and even unrestored examples command high prices. Michael Thorne, author of Ferguson TE20 in Detail,

continues the story as he describes the development of these models, the production versions and their capabilities, options and extras, conversions, implements and their use today. Outstanding surviving examples are featured in some 80 photographs specially taken for this book, and there are approximately 120 accompanying archive illustrations.

The World of Custom Trucks World Health Organization

The second half of the 20th century and the beginning of the 21st century witnessed important changes in ecology, climate and human behaviour that favoured the development

of urban pests. Most alarmingly, urban planners now face the dramatic expansion of urban sprawl, in which city suburbs are growing into the natural habitats of ticks, rodents and other pests. Also, many city managers now erroneously assume that pest-borne diseases are relics of the past. All these changes make timely a new analysis of the direct and indirect effects of present-day urban pests on health. Such an analysis should lead to the development of strategies to manage them and reduce the risk of exposure. To this end, WHO invited international experts in various fields - pests, pest-related diseases and pest management - to provide evidence on which to base policies. These experts identified the public health risk posed by various pests and appropriate measures to prevent and control them. This book presents their conclusions and formulates policy options for all levels of decision-making to manage pests

and pest-related diseases in the future. [Ed.]

Although truck efficiency and performance are priorities for operators and drivers, their pride in their vehicles shows itself in the way that so many are customised and decorated.

Ferdy De Martin & Xavier Stefaniak have selected 29 examples of currently working trucks whose decoration is an art form, ranging from the delicate and subtle to transport rococo - a phantasmagoria of images in bright colours. The imaginative designs, high standard of craftsmanship and superb finish create unique vehicles that are immediately recognisable and attract devoted followers. Over 250 fantastic photographs are accompanied by concise captions that are both enthusiastic and illuminating; the authors do full justice to the trucks. The text is in
