"CNC programmers and service technicians will find this book a very useful training and reference tool to use in a production environment. Also, it will provide the basis for exploring in great depth the extremely wide and rich field of programming tools that macros truly are."--BOOK JACKET.

Understanding Mastercam Mastercam Training Books

Overview This unique text presents a thorough introduction to Mastercam X7 Mill for students with little or no prior experience. It can be used in virtually any educational setting -- from four-year engineering schools to community colleges and voc/tech schools to industrial training centers -- and will also serve as a reliable reference for on-the-job use or as a self-study manual. The award-winning authors have carefully arranged the contents in a clear and logical sequence and have used many hundreds of visuals instead of wordy explanations. Two enclosed CDs contain Mastercam X7 Demo and also include examples and exercises from the text for student practice. Features Emphasizes student-friendly graphical displays in place of long explanations and definitions. Includes an overview of the process of generating a word address program. Presents numerous examples that provide step-by-step instructions with graphical displays. Eliminates flipping between pages by featuring all explanations on the same page as the example. Contains exercises at the end of each chapter. Features a process plan for many machining exercises to indicate the machining operations to be performed and the tools to be used. All operations now done in Windows 7. Includes the new Verifier. Includes the new Code Expert. Features editing solid models imported from other CAD packages such as SolidWorks.

The Mastercam 2021 Black Book is the first edition of our series on Mastercam. The book is authored to help professionals as well as learners in creating some of the most complex NC toolpaths. The book follows a step by step methodology. In this book, we have tried to give real-world examples with real challenges in designing. We have tried to reduce the gap between university use of Mastercam and industrial use of Mastercam. The book covers almost all the information required by a learner to master Mastercam. The book starts with basics of machining and ends at advanced topics like 3D High Speed Machining Toolpaths. Some of the salient features of this book are: In-Depth explanation of concepts Every new topic of this book starts with the explanation of the basic concepts. In this way, the user becomes capable of relating the things with real world. Topics Covered Every chapter starts with a list of topics being covered in that chapter. In this way, the user can easily find the topic of his/her interest easily. Instruction through illustration The instructions to perform any action are provided by maximum number of illustrations so that the user can perform the actions discussed in the book easily and effectively. There are about 750 small and large illustrations that

make the learning process effective. Tutorial point of view At the end of concept's explanation, tutorials make the understanding of users firm and long lasting. Almost each chapter of the book related to machining has tutorials that are real world projects. Moreover most of the tools in this book are discussed in the form of tutorials. For Faculty If you are a faculty member, then you can ask for video tutorials on any of the topic, exercise, tutorial, or concept.

Up to now, the best way to get information on 5-axis machining has been by talking to experienced peers in the industry, in hopes that they will share what they learned. Visiting industrial tradeshow and talking to machine tool and Cad/Cam vendors is another option, only these people will all give you their point of view and will undoubtedly promote their machine or solution. This unbiased, no-nonsense, to-the-point description of 5-axis machining presents information that was gathered during the author's 30 years of hands-on experience in the manufacturing industry, bridging countries and continents, multiple languages - both human and G-Code. As the only book of its kind, Secrets of 5-Axis Machining will demystify the subject and bring it within the reach of anyone who is interested in using this technology to its full potential, and is not specific to one particular CAD/CAM system. It is sure to empower readers to confidently enter this field, and by doing so, become better equipped to compete in the global market.

MASTERCAM EXERCISES Do you want to learn how to design 2D and 3D models in your favorite Computer Aided Design (CAD) software such as Mastercam, FUSION 360 or SolidWorks? Look no further. We have designed 200 3D CAD exercises that will help you to test your CAD skills. What's included in the MASTERCAM EXERCISES book? Whether you are a beginner, intermediate, or an expert, these 3D CAD exercises will challenge you. The book contains 200 3D models and practice drawings or exercises. -Each exercise contains images of the final design and exact measurements needed to create the design. -Each exercise can be designed on any CAD software which you desire. It can be done with AutoCAD, SolidWorks, Inventor, DraftSight, Creo, Solid Edge, Catia, NX and other feature-based CAD modeling software. -It is intended to provide Drafters, Designers and Engineers with enough 3D CAD exercises for practice on Mastercam. -It includes almost all types of exercises that are necessary to provide, clear, concise and systematic information required on industrial machine part drawings. -Third Angle Projection is intentionally used to familiarize Drafters, Designers and Engineers in Third Angle Projection to meet the expectation of worldwide Engineering drawing print. -This book is for Beginner, Intermediate and Advance CAD users. -Clear and well drafted drawing help easy understanding of the design. -These exercises are from Basics to Advance level. -Each exercises can be assigned and designed separately. -No Exercise is a prerequisite for another. All dimensions are in mm. Prerequisite To design & develop models, you should have knowledge of Mastercam. Student should have knowledge of Orthographic views and projections. Student should have basic knowledge of engineering drawings.
