Dependency Injection will  
teach you everything you  
need to know in order to  
implement dependency  
injection using Ninject in a  
real-life project. Not only  
does it teach you about  
Ninject core framework  
features that are essential  
for implementing  
dependency injection, but it  
also explores the power of  
Ninjects most useful  
extensions and  
demonstrates how to apply  
them.

Constructor Injection. This is a widely used way to implement DI. Dependency Injection is done by supplying the DEPENDENCY through the class's constructor when creating the instance of that class. Injected component can be used anywhere within the class. Recommended to use when the injected dependency, you are using across the class methods.
