Research has shown that algebra is the doorway and gateway for future success of students in many aspects, including high school graduation, attending and success in college, and professional earning power. And the most important key to students' success in algebra is their readiness. This book is not only a program that addresses algebra readiness; it is also a fundamental reform effort, based on the National Mathematics Advisory Panel's (NMAP's) Final Report (spring, 2008). The book approaches mathematic skills deficiencies on an individual basis, much like an IEP addresses the individual needs of a student with disabilities. The Reaching

Algebra Readiness (RAR) process consists of four components: (1) Diagnostic, assessing student's mastery of the skills needed to take algebra; (2) Prescriptive, developing an individualized plan to address specific math deficiencies; (3) Intervention, utilizing tools and resources (parental involvement, effective teaching strategies, etc), to improve students' mathematics skills; and (4) Drills and Effective Teachings Strategies, mathematics is a discipline and, simply, there is no way of avoiding practice and drilling in reaching algebra readiness, which can be enhanced significantly by implementing proven effective teaching strategies. The Reaching Algebra Readiness (RAR) process and the related materials presented in this book will be revolutionary in helping all students acquire the math skills needed for success in algebra and beyond. This book is a must-guide for math teachers, parents who home school, parents who are looking for solutions, and educators pursuing fundamental education reforms. This book makes a major contribution to knowledge and theory by drawing implications of teacher effectiveness research for the field of teacher training and professional development.

The first part of the book provides a critical review of research on teacher training and professional development and illustrates the limitations of the main approaches to teacher development such as the competence-based and the holistic approach. A dynamic perspective to policy and practice in teacher training and professional development is advocated. The second part of the book provides a critical review of research on teacher effectiveness. The main phases of this field of research are analysed. It is pointed out that teacher factors are presented as being in opposition to one another. An integrated approach in defining quality of teaching is adopted. The importance of taking into account findings of studies investigating differential teacher effectiveness is argued. Another significant limitation of this field of research is that the whole process of searching for teacher effectiveness factor was not able to have a significant impact upon teacher training and professional development. For this reason it is advocated that teacher training and professional development should be focused on how to address grouping of specific teacher factors associated with student learning and on how to help teachers improve their teaching skills by moving from using skills associated with direct teaching only to more advanced skills concerned with new teaching approaches and differentiation

of teaching. The book refers to studies conducted in different countries illustrating how the proposed approach can be used by policy and practice in teacher education. Specifically, the book provides evidence supporting the validity of the theoretical framework upon which this approach is based. Moreover, experimental and longitudinal studies supporting the use of this approach for improvement purposes are presented and suggestions for further research utilising and expanding the Dynamic Approach for teacher training and professional development are provided.

In this book, Rossow and Warner incorporate the best of all the advances in the theories and developments in the field on study devoted to the principalship since 1990. Although the titles to the eleven chapters remain the same as those found in the first edition, much has changed. Since many areas addressed in the first edition are nearly timeless, some topics are presented again. One of the basic premises in the first edition came from a clear change in the direction the principalship was taking in the late 1980s and early 1990s. There was a movement away from principal as manager -- of people and a building -- to principal as instructional leader. Unlike a number of movements in education which turn out to be merely "fads," there has been no change in this direction for principalship. The literature and the training for future principals continues to capture the concept that principals must be instructional leaders while attending to the safety of students and teachers. This book will assist those responsible for the education of principals, as well as help those already in the field become updated on the newest advances in the discipline.

A synthesis of nearly 2,000 articles to help make engineers better educators  
While a significant body of knowledge has evolved in the field of engineering education over the years, much of the published information has been restricted to scholarly journals and has not found a broad audience. This publication rectifies that situation by reviewing the findings of nearly 2,000 scholarly articles to help engineers become better educators, devise more effective curricula, and be more effective leaders and advocates in curriculum and research development.

The author's first objective is to provide an illustrative review of research and development in engineering education since 1960. His second objective is, with the examples given, to encourage the practice of classroom assessment and research, and his third objective is to promote the idea of curriculum leadership. The publication is divided into four main parts: Part I demonstrates how the underpinnings of education—history, philosophy, psychology, sociology—determine the aims and objectives of the curriculum and the curriculum's internal structure, which integrates assessment, content, teaching, and learning Part II focuses on the curriculum itself, considering such key issues as content organization, trends, and change. A chapter on interdisciplinary and integrated study and a chapter on project and problem-based models of curriculum are included Part III examines problem solving, creativity, and design Part IV delves into teaching, assessment, and evaluation, beginning with a chapter on the lecture, cooperative learning, and teamwork The book ends with a brief, insightful forecast of the future of engineering education. Because this is a practical tool and reference for engineers, each chapter is self-contained and may be read independently of the others.

Unlike other works in engineering education, which are generally intended for educational researchers, this publication is written not only for researchers in the field of engineering education, but also for all engineers who teach. All readers acquire a host of practical skills and knowledge in the fields of learning, philosophy, sociology, and history as they specifically apply to the process of engineering curriculum improvement and evaluation.
