Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and

regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Management decisions on appropriate practices and policies regarding tropical forests often need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at different scales and how they varied through time in response to policy and other processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with stakeholder input, which focuses on FSC certification of natural tropical forests. More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy effects that FSC certification of natural forest has had in Brazil as well as in other tropical countries. The contents of this volume highlight the opportunities and constraints that those responsible for managing natural forests for timber production have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.

Supply Chain Design and Management Currency Bachelor Thesis from the year 2012 in the subject Business economics - Business Management, Corporate Governance, grade: A, University of Cambridge, course: Business economics - Business Management, Corporate Governance, language: English, abstract: The study is being conducted on the issues and problems that were faced by the Five Star Industries Private Limited, a famous mattress brand which had been suffering from heavy losses owing to the company's sales falling and competition penetrating the market, with continuously increasing day by day. The company came into being in 1966 when a carpenter and his wife took the initiative and formed this company to produce spring mattresses. In order to produce the mattresses, Gim Sin the carpenter purchased sophisticated machinery owing to the machines high productivity and quality. However, with time, the intensity of the competition in the mattress producing industry increased and the company had to suffer from the problems of local mattress producers dominating the mattress market and thus forced the company to take corrective action. The company was highly affected

since it was heavily dependent on the local dealers who now penetrated the market with their own production of mattresses. However, the company attempted to do this by increasing its product range and service level. Although the action was to improve the company's condition, yet it further deteriorated the company's position since the variety of product ranges which now resided in their portfolio became difficult for them to manage since the increased variety slowed the mattress production. The act of thus matching the demand with the supply of these variety of mattresses became a problem for the company and thus led to the company facing order fulfillment problems since the wide variety of products produced and the orders of these various mattresses put a heavy pressure on the company's manufacturing operations and created difficulties in production scheduling in turn. This pressure on the manufacturing sector of the business and the problems faced by the company instigated a fear in Gim Sin of employees leaving the organization since their job has been toughening day by day due to the introduction of this wide variety of products.

Strengthening Forensic Science in the United States Cambridge University Press World-renowned economist Klaus Schwab, Founder and

Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
