Bachelor Thesis from the year 2012 in the subject Business economics - Business Management, Corporate Governance, grade: A, University of Cambridge, course: Business economics - Business Management, Corporate Governance, language: English, abstract: The study is being conducted on the issues and problems that were faced by the Five Star Industries Private Limited, a famous mattress brand which had been suffering from heavy losses owing to the company's sales falling and competition penetrating the market, with continuously increasing day by day. The company came into being in 1966 when a carpenter and his wife took the initiative and formed this company to produce spring mattresses. In order to produce the mattresses, Gim Sin the carpenter purchased sophisticated machinery owing to the machines high productivity and quality. However, with time, the intensity of the competition I the mattress producing industry increased and the company had to suffer from the problems of local mattress producers dominating the mattress market and thus forced the company t take corrective action. The company was highly affected since it was heavily dependent on the local dealers who now penetrated the market with their own production of mattresses. However, the company attempted

to do this by increasing its product range and service level. Although the action was to improve the company's condition, yet it further deteriorated the company's position since the variety of product ranges which now resided in their portfolio became difficult for them to manage since the increased variety slowed the mattress production. The act of thus matching the demand with the supply of these variety of mattresses became a problem for the company and thus led to the company facing order fulfillment problems since the wide variety of products produced and the orders of these various mattresses put a heavy pressure on the company's manufacturing operations and created difficulties in production scheduling in turn. This pressure o the manufacturing sector of the business and the problems faced by the company instigated a fear in Gim Sin of employees leaving the organization since their job has been toughening day by day due to the introduction of this wide variety of products.

Management decisions on appropriate practices and policies regarding tropical forests often need to be made in spite of innumerable uncertainties and complexities. Among the uncertainties are the lack of formalization of lessons learned regarding the impacts of previous programs and projects. Beyond the challenges of generating the proper information on these impacts, there are other difficulties that relate with how to socialize the information and knowledge gained so that change is transformational and enduring. The main complexities lie in understanding the interactions of social-ecological systems at different scales and how they varied through time in response to policy and other processes. This volume is part of a broad research effort to develop an independent evaluation of certification impacts with stakeholder input, which focuses on FSC certification of natural tropical forests. More specifically, the evaluation program aims at building the evidence base of the empirical biophysical, social, economic, and policy effects that FSC certification of natural forest has had in Brazil as well as in other tropical countries. The contents of this volume highlight the opportunities and constraints that those responsible for managing natural forests for timber production have experienced in their efforts to improve their practices in Brazil. As such, the goal of the studies in this volume is to serve as the foundation to design an impact evaluation framework of the impacts of FSC certification of natural forests in a participatory manner with interested parties, from institutions and organizations, to communities and individuals.

In recent years, supply chain planning has emerged as one of the most challenging problems in the industry. As a consequence, the planning focus is shifting from the management of plant-speci?c operations to a holistic view of the various logistics and productionstages, that is an approach in which suppliers, productionplants and customers

are considered as constituents of an integrated network. A major driving force behind this development lies in the globalization of the world economy, which has facilitated the co-operation between different partners working together in world-wide logistics networks. Hence, considerable cost savings can be gained from optimizing the structure and the operations of complex supply networks linking plants, suppliers, distribution centres and customers. Consequently, to improve the performance of the entire logistic chain, more sophisticated planning systems and more effective decision support are needed. Clearly, successful applications of supply chain management have driven the development of advanced planning systems (APS), which are concerned with supporting decision-making activities at the strategic, tactical and operational decision level. These software packages basically rely on the application of quantitative methods, which are used to model the underlying complex decision problems considering the limited availability of resources and the need to react on time to customer orders. The core module at the mid-term level of APS comprises operational supply chain planning. In many industries, production stages are assigned to different plants and distribution centres have been established at geographically dispersed locations.

How to outsmart risk Risk has been defined as the potential for losing something of value. In business, that value could be your original investment or your expected future returns. The Risk-Driven Business Model will help you manage risk better by showing how the key choices you make in designing your business models either increase or reduce two characteristic types of risk—information risk, when you make decisions without enough information, and incentive-alignment risk, when decision makers' incentives are at odds with the broader goals of the company. Leaders who understand how the structure of their business model affects risk have the power to create wealth, revolutionize industries, and shape a better world. INSEAD's Karan Girotra and Serguei Netessine, noted operations and innovation professors who have consulted with dozens of companies, walk you through a business model audit to determine what key decisions get made in a business, when they get made, who makes them, and why we make the decisions we do. By changing your company's key decisions within this framework, you can fundamentally alter the risks that will impact your business. This book is for entrepreneurs and executives in companies involved in dynamic industries where the locus of risk is shifting, and includes lessons from Zipcar, Blockbuster, Apple, Benetton, Kickstarter, Walmart, and dozens of other global companies. The Risk-Driven Business Model demystifies business model risk, with clear directives aimed at improving decision making and driving your business forward.
