Ninth Edition of Materials Science and Engineering continues to promote student understanding of the three primary types of materials (metals, ceramics, and polymers) and composites, as well as the relationships that exist between the structural elements of materials and their properties. This edition is supported by a redesigned version of Virtual Materials Science and Engineering (VMSE).

Materials Science and Engineering is intended for students who want to learn about the nature of solid substances and, especially, for beginning engineering students who are making their first serious contact with the structure and properties of real solids.
