Material selection is a step in the process of designing any physical object. In the context of product design, the main goal of material selection is to minimize cost while meeting product performance goals. Systematic selection of the best material for a given application begins with properties and costs of candidate materials. For example, a thermal blanket must have poor thermal ...

Materials selection and substitution decisions are unlike the exact sciences, where there is usually only one single correct solution to a problem. This is due to material selection requiring the consideration of conflicting advantages and limitations, necessitating compromises and trade-offs. Thus, different satisfactory solutions are possible.
