(a) (6 points) Find the present value of the money flow at the end of 7 years. Round your answer to the nearest cent. The continuous money flow is given by $f(t) = 5300e^{0.048t}$. The present value of this money flow is.

$P = 7.0 \cdot 5300 e^{0.048t} - 0.029$
tdt. $P = 7.0 \cdot 5300 e^{0.019t} =$
[5300. $e^{0.019t} - 0.019$] $7.0 P = \$39,$

Math 116 / Final (December 17, 2019) page 7

6. [11 points] a. [7 points] Determine whether the following series converges or diverges. Be sure to fully justify your answer, showing all work and indicating any theorems you use. $\sum_{n=1}^{\infty} \sin(2n) n^3 + 5$ Answer (Circle one): Diverges Converges Justification: Solution: We have $|\sin(2n)| \leq 1$ $\sum_{n=1}^{\infty} 1 n^3$ Since $\sum_{n=1}^{\infty} 1 n^3$

Need help with my math 116 final exam is there a way I can ...

Beginning at least a week before an exam, take time to work some of the previous exams—with the correct mindset and under “test like” conditions. That means:

download a previous semester exam (without solutions!), set aside 90 minutes (or 2 hours for a final) when you can concentrate on the exam without interruptions and without the book.

Math 116 Practice Final Exam - Radford University

Like Math 114, the course assumes familiarity with the material in Math 103 and Math 104. Math 116 is followed by Math 260, an honors version of Math 240. The precise sequence of topics within each semester will differ somewhat between the Math 114-240 sequence and the Math 116-260 sequence; but over the course of the two semesters, the honors sequence will cover the usual material and more.

Problems to study for Math 116 Exam 3

Math 116 / Final (April 26, 2013) page 8 b.

[4 points] Find a formula for a_n in terms of p . Show all your work. Solution: We know that

$1 = \int_0^1 a(t+1)^p dt$. We use u -substitution with $u = t+1$ to calculate the integral: $\int_0^1 a(t+1)^p dt = \lim_{b \rightarrow \infty} \int_{b+1}^b a u^{-p} du = \lim_{b \rightarrow \infty} \int_{b+1}^b a u^{-p} du = \lim_{b \rightarrow \infty} \left[\frac{a}{-p+1} u^{-p+1} \right]_{b+1}^b = \lim_{b \rightarrow \infty} \left[\frac{a}{-p+1} (b^{-p+1} - (b+1)^{-p+1}) \right]$

$\int_0^1 a(t+1)^p dt = \lim_{b \rightarrow \infty} \int_{b+1}^b a u^{-p} du = \lim_{b \rightarrow \infty} \left[\frac{a}{-p+1} u^{-p+1} \right]_{b+1}^b = \lim_{b \rightarrow \infty} \left[\frac{a}{-p+1} (b^{-p+1} - (b+1)^{-p+1}) \right]$

$\lim_{b \rightarrow \infty} \left[\frac{a}{-p+1} (b^{-p+1} - (b+1)^{-p+1}) \right] = \frac{a}{-p+1} (1 - 1) = 0$

$(-p+1) | b+1 |^{-p+1} = \lim_{b \rightarrow \infty} \frac{a}{-p+1} (b^{-p+1} - (b+1)^{-p+1})$

$(-p+1) u^{-p+1} = \lim_{b \rightarrow \infty} \frac{a}{-p+1} (b^{-p+1} - (b+1)^{-p+1})$

$(-p+1) u^{-p+1} = \lim_{b \rightarrow \infty} \frac{a}{-p+1} (b^{-p+1} - (b+1)^{-p+1})$
