Gifted students can exhibit extreme variance in both their abilities and their interests, yet they are often treated within schools as one homogeneous, specialized population. Personalized Learning in Gifted Education helps educators strengthen their differentiation of both instruction and services for advanced students. This book:

-
- helps educators develop the specific gifts and talents of the gifted students they serve
 - includes a year-long plan for professional learning communities seeking to transform their programs
 - demonstrates how educators can utilize the wealth of data they have at their disposal
 - provides a rationale and blueprint for a stronger, more personalized approach to gifted education
 - offers suggestions for both elementary and secondary schools. Recommendations center around five features of personalized learning: personalized learning plans, project- or problem-based learning, competency-based progression through the curriculum, criterion-referenced assessments, and multi-year mentoring.

Concerns about quality mathematics education are often posed in terms of the types of mathematics that are worthwhile and valuable for both the student and society in general, and about how to best support students so that they can develop this mathematics. Concerns about equity are about who is excluded from the opportunity to develop quality mathematics within our current practices and systems, and about how to remove social barriers that systematically disadvantage those students. This collection of chapters summarises our learning about the achievement of both equity and quality agendas in mathematics education and to move forward the debate on their importance for the field.
