You can solve this problem either (1) by
simplifying the numerator and denominator
separately and then simplifying the result or
(2) by using the distributive property. For this
problem, we will use the first method. First
rewrite $4x$ as an exponent of 2 using the
property, $(b \cdot x)^y = b^y \cdot x^y$. $4x = (2 \cdot 2)^x = 2^2x$
