'Interspersed with acts of breathtaking linguistic daring.' Charlotte Mendelson, Observer Book of the Year Opening with a powerful and tender 'Ode to the Hymen', Sharon Olds uses this age-old poetic form to address many aspects of herself, in a collection that is centred around

the female body and female pleasures, and touches along the way on parts of her own story which will be familiar from earlier works, each episode and memory now burnished by the wisdom and grace of looking back. In such poems as 'Ode to My Sister', 'Ode of Broken Loyalty', 'Ode to My Whiteness', 'Blow Job Ode', 'Ode to the Last 38 Trees in New York City Visible from This Window', Olds treats us to an intimate self-examination that, like all her work, is universal and by turns searing and charming in its honesty. From the early bodily joys and sorrows of her girlhood to the recent deaths of those dearest to her – the 'Sheffield Mountain Ode' for Galway Kinnell is one of the most stunning pieces here – Olds shapes her world in language that is startlingly fresh, profound in its conclusions, and life-giving for the reader.

Finally, you can learn computation theory and programming language design in an engaging, practical way. *Understanding Computation* explains theoretical computer science in a context you'll recognize, helping you appreciate why these ideas matter and how they can inform your day-to-day programming. Rather than use mathematical notation or an unfamiliar academic programming language like Haskell or Lisp, this book uses Ruby in a reductionist manner to present formal semantics, automata theory, and functional programming with the lambda calculus. It's ideal for programmers versed in modern languages, with little or no formal training in computer science. Understand fundamental computing concepts, such as Turing completeness in languages Discover how programs use dynamic semantics to communicate ideas to machines Explore what a computer can do when reduced to its bare essentials Learn how universal Turing machines led to today's general-purpose computers Perform complex calculations, using simple languages and cellular automata Determine which programming language features are essential for computation Examine how halting and self-referencing make some computing problems unsolvable Analyze programs by using abstract interpretation and type systems

Enemies (Hardcover) Penguin

Stone Reeves was my neighbor, and I've hated him since sixth grade. Gorgeous and charismatic, he became the town's football god, while I became the town's invisible girl. He went to a Division 1 school for football, while my father was fired by his father. His team won the National Championship, while my mother died the same day. He was a first round pick for the NFL while I made the worst decision of my life. Now I'm in Texas trying to pick up the pieces of my life. But, Stone is here. Stone is everywhere. It doesn't matter that disaster has struck my life again. It doesn't matter that he's the one trying to console me. It doesn't matter that he's the nation's newest football obsession. Because for me, he always has been and always will be my enemy.

Holt Algebra 1 Holt McDougal

Living in a world circumscribed by up-to-the-minute news and electronic tools we barely master before they are out-of-date, we attempt to shield ourselves from environmental events which threaten to overturn our constructed reality. Naturally, in such fast-paced and topsy-turvy surroundings we watch the sky and earth for signs of regularity; looking to the changing seasons for hope and rejuvenation, and seeking out the voices of those who speak of constancy in the changes of the natural world. Hal Borland was such a voice. Every week, beginning in 1941, in the editorial pages of *The New York Times* he would speak of living on the land—this natural world we all try to understand. In this collection of 365 of his essays, arranged daily within the twelve months, he writes with a familiarity of the ways of the country that is at once humble and resiliently knowledgeable. In *Sundial of the Seasons* you will find page-long ruminations on such topics as “Fog” (“a unique blend of mood and weather”), “The Bumblebee” (“Bumblebees tolerate man, up to a point”), “Dandelions” (“Neither flood nor drouth seems to discourage it”), and “Fishing” (“The fish caught are only a lesser part of the catch”), all in celebration of the everyday events of life in the country. Begin each day with the gentle wit and wisdom of the person who, for nearly four decades, wrote his “outdoor editorials” in an engaging and inimitable fashion eagerly read by thousands.
