The achievement of Japanese high
school students gained world
prominence largely as a result of
their performance in the
International Mathematics Studies
conducted by the International
Association for the Evaluation of
Educational Achievement in the
1960s and 1980s. These textbooks
(Mathematical World volumes 8 to
11) are intended to give U. S.

educators and researchers a first-
hand look at the content of
mathematics instruction in Japan.
The textbook, Japanese Grade 10
covers material that is compulsory.
This course, which is completed by
over 97% of all Japanese students,
is taught four hours per week and
comprises algebra (including
quadratic functions, equations, and
inequalities), trigonometric
functions, and coordinate geometry.
Japanese Grade 11 is intended for
the easier of the electives offered in
that grade and is taken by about
40% of the students. It covers
probability and statistics, vectors,
exponential, logarithmic, and

trigonometric functions, and an introduction to differentiation and integration. The other 60% of students in grade 11 concurrently take two more extensive courses using the texts Japanese Grade 11 Algebra and Geometry and Japanese Grade 11 Basic Analysis. The first consists of fuller treatments of plane and solid coordinate geometry, vectors, and matrices. The second includes a more thorough treatment of trigonometry and a more extensive introduction to differential and integral calculus.
