of Finance A deposit of dollars today at a rate of interest P for years produces interest of $t r I = \text{Prt}$. The interest, added to the original principal P , gives $P + \text{Prt} = P(1 + rt)$. This amount is called the future value of P dollars at an interest rate r for time t in years. When loans are involved, the future value is often called the maturity value of the loan.

$k(1+i)^t$ t. $k=0$; and the value
of i that solves this equation is
the (nominal) yield. However,
the payment of P due at time
t equals $P=Q(t)$ in real terms,
where $Q(t)$ denotes the value
of the price index at time t ; the
payment can buy $P=Q(t)$ units
of the index. Thus, the
equation of value in real terms
is X .
