Teachers helps pre-service teachers become more effective problem-solvers so they can better teach their students. This manual features practical suggestions and tools that transcend rote procedures and emphasize methods that work best for students. After a brief history of math education and an examination of current standards, the book discusses different areas of instruction and how to teach them effectively. Target skills

include sets and Venn diagrams, whole numbers, fractions and decimals, percent, integers, and real numbers. Readers learn various ways to approach and work through the problems to meet the varied needs of their students. The second edition features a new chapter on addition, subtraction, multiplication, and division utilizing the Base 5 numeration system, fresh review problems throughout, and new problem-solving

content in Chapter 7: Problem Solving Revisited. Finding your Math Power helps readers increase their abilities and embrace their math power. The book is appropriate for elementary and middle school education programs for pre-service teachers. It is also an excellent reference for teaching professionals seeking to improve their skills as math educators. Karla Karstens is a senior lecturer and Kroepsch-Maurice Award winner at

the University of Vermont. Karla taught high school mathematics in Elk River, Minnesota, after graduating from the College of St. Benedict. She then continued her studies and earned a master's degree in mathematics at the University of Vermont. Upon graduation, she was hired by the University of Vermont to teach math to prospective elementary and middle school teachers. For nearly 30 years, Karla has instructed

future educators in the math they need to know in order to be successful in their classrooms.

This book is an amazing resource for teachers who are struggling to help students develop both procedural fluency and conceptual understanding.. --Dr. Margaret (Peg) Smith, co-author of *5 Practices for Orchestrating Productive Mathematical Discussions* Robert Kaplinsky, the co-creator of Open Middle

math problems, brings his new class of tasks designed to stimulate deeper thinking and lively discussion among middle and high school students in *Open Middle Math: Problems That Unlock Student Thinking, Grades 6-12*. The problems are characterized by a closed beginning, - meaning all students start with the same initial problem, and a closed end, - meaning there is only one correct or optimal answer. The key is that the middle is open- in the sense that there are multiple ways to approach and ultimately

solve the problem. These tasks have proven enormously popular with teachers looking to assess and deepen student understanding, build student stamina, and energize their classrooms. *Professional Learning Resource for Teachers: Open Middle Math* is an indispensable resource for educators interested in teaching student-centered mathematics in middle and high schools consistent with the national and state standards. *Sample Problems at Each Grade: The book*

demonstrates the Open Middle concept with sample problems ranging from dividing fractions at 6th grade to algebra, trigonometry, and calculus. Teaching Tips for Student-Centered Math Classrooms: Kaplinsky shares guidance on choosing problems, designing your own math problems, and teaching for multiple purposes, including formative assessment, identifying misconceptions, procedural fluency, and conceptual understanding. Adaptable and Accessible Math: The tasks can be

solved using various strategies at different levels of sophistication, which means all students can access the problems and participate in the conversation. Open Middle Math will help math teachers transform the 6th -12th grade classroom into an environment focused on problem solving, student dialogue, and critical thinking.

Math Focus 7 Teacher Created Resources Activities in this book include drills, lessons, clarification techniques, and

research strategies; each with a computer connection component.
