Driven by the demands of research and the entertainment industry, the techniques of animation are pushed to render increasingly complex objects with ever-greater life-like appearance and motion. This rapid progression of knowledge and technique impacts professional developers, as well as students.

Developers must maintain their understanding of

conceptual foundations, while their animation tools become ever more complex and specialized. The second edition of Rick Parent's Computer Animation is an excellent resource for the designers who must meet this challenge. The first edition established its reputation as the best technically oriented animation text. This new edition focuses on the many recent developments in animation technology, including fluid animation, human figure animation, and soft body animation. The new edition revises and expands coverage of topics such as quaternions, natural phenomenon, facial animation, and inverse kinematics. The book includes up-to-date discussions of Maya scripting and the Maya C++ API, programming on real-time 3D graphics hardware, collision detection, motion capture, and motion capture data

processing. - New up-to-the-moment coverage of hot topics like real-time 3D graphics, collision detection, fluid and soft-body animation and more! - Companion site with animation clips drawn from research & entertainment and code samples - Describes the mathematical and algorithmic foundations of animation that provide the animator with a deep understanding and control of technique

Worksheets That Teach On
The Mark Press

This book is the road map to proficiency and development in the field of qualitative research. Borrowing from a wealth of experience teaching introductory qualitative research courses, author Kakali Bhattacharya lays out a

dynamic program for learning different paradigms of inquiry, empowering students to recognize the convergence of popular research methodologies as well as the nuances and complexities that set each of them apart. Her book: supplements the readings and activities in a qualitative methods class, exposing students to the research process and the dominant types of qualitative research; introduces a variety of theoretical perspectives in qualitative research, including positivism and postpositivism, interpretivism, feminism, symbolic interactionism, phenomenology, hermeneutics, critical theory, and Critical Race Theory; identifies and summarizes the three dominant methodological approaches in qualitative research: narrative inquiry, grounded theory, and ethnography; provides interactive activities and exercises to help students

crystallize their understanding of the different topics in each chapter.
