Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Marginality does not mean isolation. In Africa where people are permanently on the move in search, inter alia, of a 'better elsewhere', marginality means disconnection to obvious possibilities and the invisibility of the myriad connections that make life possible for the ordinarily sidestepped. This book is about the workings of networks of the mobile in Africa, a continent usually associated with the 'global shadows' of the world. How do changes in the possibilities for communication, with the recent hype of mobile technology, influence the social and economic dynamics in Africa's mobile

margins? To what extent is the freedom associated with new Information and Communication Technologies reality or disillusion for people dwelling in the margins? Are ordinary Africans increasingly Side@Ways? How social are these emergent Side@Ways? Contributions to answering these and related questions are harvested from ethnographic insights by team members of the WOTRO funded 'Mobile Africa revisited' research programme hosted by the African Studies Centre, Leiden, The Netherlands.

This open access volume presents a comprehensive account of all aspects of biological invasions in South Africa, where research has been conducted over more than three decades, and where bold initiatives have been implemented in attempts to control invasions and to reduce their ecological, economic and social effects. It covers a broad range of themes, including history, policy development and implementation, the status of invasions of animals and plants in terrestrial, marine and freshwater environments, the development of a robust ecological theory around biological invasions, the effectiveness of management interventions, and scenarios for the future. The South African situation stands out because of the remarkable diversity of the country, and the wide range of problems encountered in its varied ecosystems, which has resulted in a disproportionate investment into both research and management. The South African experience holds many lessons for other parts of the world, and this book should be of immense value to researchers, students, managers, and policy-makers who deal with biological invasions and ecosystem management and conservation in most other regions.

The 1996 South African Constitution was promulgated on 18th December 1996 and came into effect on 4th February 1997. Its aspirational provisions promised to transform South Africa's economy and society along non-racial and egalitarian lines. Following the twentieth anniversary of its enactment, this book, co-edited by Rosalind Dixon and Theunis Roux, examines the triumphs and disappointments of the Constitution. It explains the arguments in favor of the Constitution being replaced with a more authentically African document, untainted by the necessity to compromise with ruling interests predominant at the end of apartheid. Others believe it remains a landmark attempt to create a society based on social, economic, and political rights for all citizens, and that its true implementation has yet to be achieved. This volume considers whether the problems South Africa now faces are of constitutional design or implementation, and analyses the Constitution's external influence on constitutionalism in other parts of the world.

Tshepang: The Third Testament Springer Nature
The argumentative point of departure of this scholarly book is the common conviction of specialists in the field of education in South Africa that the national education system is not at a satisfactory level – in both the academic and the public discourse. Such allegations are made and, frequently, stronger adjectives than ‘ non-satisfactory ’ are used. Results of international test series in which South Africa has participated, such as the 2015 TIMSS tests, confirm the negative verdicts found in the (public and scholarly) discourse. This book aims to argue that although the lack of performance could be attributed to a multiplicity of factors, one factor that can make a difference in the achievement levels obtained by learners in schools is leadership. The book demonstrates that a particular problem of both the scholarly and the public discourse on education in South Africa is an overtone of defeatism or resignation, blaming all ills in the education system and educational institutions on historical legacies and/or contextual factors (such as socio-economic deprivation in the catchment areas of schools) or poor resources and infrastructure. This collected work was inspired by a recently published spate of articles on top-performing schools (including top-performing schools in rural communities), in which it was demonstrated that good leadership can overcome such contextual and other challenges. The book unpacks the issue of leadership in South African schools from a variety of perspectives, thus contributing to the development of the scholarly discourse on Educational Leadership in South Africa. The target audience of the book is scholars of Educational Leadership. The research reported in the chapters draw on a wide range of methodologies, including empirical (survey) research (questionnaires and interviews), critical literature surveys, and the comparative method.

Educational Assessment in a Time of Reform provides background information on large-scale

examination systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough . If not, then how can it be improved? The aim of this book is to provide a point of departure for discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation.

Commonwealth Universities Yearbook by Mocktime Publication

This book draws together two domains of psychological theory, Vygotsky ' s cultural-historical theory of cognition and narrative theories of identity, to offer a way of rethinking the human subject as embodied, relational and temporal. A dialogue between these two ostensibly disparate and contested theoretical trajectories provides a new vantage point from which to explore questions of personal and political change. In a world of deepening inequalities and increasing economic precarity, the demand for free, decolonised quality education as articulated by the South African Student Movement and in many other contexts around the world, is disrupting established institutional practices and reinvigorating possibilities for change. This context provokes new lines of hopeful thought and critical reflection on (dis)continuities across historical time, theories of (social and psychological) developmental processes and the practices of intergenerational life, particularly in the domain of education, for the making of emancipatory futures. This is essential reading for academics and students interested in Vygotskian and narrative theory and critical psychology, as well as those interested in the politics and praxis of higher education.
