This second volume of papers from the ATC21STM project deals with the development of an assessment and teaching system of 21st century skills. Readers are guided through a detailed description of the methods used in this process. The first volume was published by Springer in 2012 (Griffin, P., McGaw, B. & Care, E., Eds., *Assessment and Teaching of 21st Century Skills*, Dordrecht: Springer). The major elements of this new volume are the identification and description of two 21st century skills that are amenable to teaching and learning: collaborative problem solving, and learning in digital networks. Features of the skills that need to be mirrored in their assessment are identified so that they can be reflected in assessment tasks. The tasks are formulated so that reporting of student performance can guide implementation in the classroom for use in teaching and learning. How simple tasks can act as platforms for development of 21st century skills is demonstrated, with the concurrent technical infrastructure required for its support. How countries with different languages and cultures participated and contributed to the development process is described. The psychometric qualities of the online tasks developed are reported, in the context of the robustness of the automated scoring processes. Finally, technical and educational issues to be resolved in global projects of this nature are outlined.

Signs of Change: Assessment Past, Present and Future Another Time, Another Place...Examinations Then and Now In the Temple of Literature in Hanoi, Vietnam, a series of stone stelae records the names of the handful of illustrious examination candidates who, in each century, passed the national examination to become a Doctor of Literature. Beginning in the 11th century, the exams were conducted personally by successive kings who pursued Confucian ideals that found expression in the enormous value placed on the pursuit of wisdom and learning. In the 21st century we are both puzzled and impressed by this tradition. Puzzled by such an explicit commitment to a meritocracy in an essentially feudal society; impressed by this enthusiasm for learning and the pursuit of wisdom at the highest level of society. Yet, there are also important similarities between the 11th and 21st centuries. Then, as now, assessment was associated with excellence, high standards, pride and competition—success for the chosen few; disappointment for the majority. Then, as now, the pursuit of excellence was embedded in a social context that favoured the elite and determined success in terms of the predilections of the powerful. Then, as now, the purpose of the assessment, the way it was conducted and its impact on society all reflected the social and economic priorities of the day.

Educational Assessment in the 21st Century

Wallowing in Mediocrity: Or Rising Above the Dismal State of Education provides a comprehensive comparative look at educational programs in several key countries across the globe. The myriad advantages of these countries' programs are counterpoised to the many fault lines in education as practiced in the United States. To offset these problematic areas, this book takes a critical look at how the United States could rectify the many problems associated with its system of education, especially concerning inefficient and unsustainable practices at the secondary and postsecondary levels. Examples include the lack of universally-accepted parameters for admission to most schools of higher education; the lack of exit exams from both secondary and post-secondary schools; the illogical repetition of propaedeutic courses the first two years at the university; the misdirection of community colleges, forcing them to make up for the shortfall of too

many students not prepared for acceptance to a 4 year university; the shenanigans associated with for-profit schools, which, for the most part, prey on veterans and those seeking a better job through education; and the almost preposterous system in place for students to finance their education. Most of these shortcomings concerning the American educational system are not part and parcel of systems across the globe. For one, the Bologna Process unified degrees among participants, providing a logical means for member states to collaborate and, most important, to provide students the opportunity to transfer from one institution to another without penalty. Several countries do not charge any tuition whatsoever; others have established a fair and logical means for repayment.

The book concerns the ways in which the new media shape communication along with educational expectations and practices in foreign language classrooms. Although foreign language learners have cheap and easy access to information and ways of communication, they also wrestle with problems that have always accompanied language learning. The focus of the book is two-fold. On the one hand, the authors demonstrate how using social networks, videoconferencing, mobile phones, wikis, and computer-mediated interaction contributes to the development of language skills, negotiated interaction, autonomy, and intercultural competence. On the other, they discuss "old" issues pertaining to the role of vocabulary, corrective feedback, textbooks and inner speech in the process of language learning and use. Every chapter reports original empirical research on issues related to the new media and old problems in foreign language teaching contexts in various countries, and with respect to various age groups.

Outlining a step-by-step assessment model, Psychological Assessment and Report Writing, Second Edition covers five key topics central to psychological assessment: understanding the context of a referral; determining what data is needed to answer referral questions; gathering the data; integrating the data; and communicating the findings. Authors Karen Goldfinger and Andrew M. Pomerantz review each facet of psychological assessment and report writing—providing how-to instructions and alerting readers to a myriad of issues they must consider when conducting

assessments in clinical, forensic, or educational environments. Filled with varied case examples that promote interest and meet instructional requirements, including one detailed case study that recurs throughout multiple chapters, the book uses sidebars and question and answer sections to encourage readers to consider their own case material and use critical thinking skills as they review each section of the model.

Reflecting the internationalization of the field of second language writing, this book focuses on political aspects and pedagogical issues of writing instruction and testing in a global context. High-stakes assessment impacts the lives of second language (L2) writers and their teachers around the world, be it the College English Test in China, Common Core-aligned assessments in the U.S., English proficiency tests in Poland, or the material conditions (such as access to technology, training, and other resources) affecting a classroom. With contributions from authors working in ten different countries in a variety

of institutional contexts, the chapters examine the uses and abuses of various writing-related assessments, and the policies that determine their form and use. Representing a diverse range of contexts, methods, and disciplines, the authors jointly call for more equitable testing systems that consider the socioeconomic, psychometric, affective, institutional, and needs of all students who strive to gain access to education and employment opportunities related to English language proficiency.

Language Learning and Teaching WCB/McGraw-Hill Education and Elitism discusses polemical debates around privilege, private schools, elitist universities, equal access to education and underlying notions of fairness. The overarching question that runs through the book is about the future of education worldwide: how can schools and universities tread the tightrope between access and quality? This book investigates the philosophical positions that characterize elitism and anti-

elitism to establish three types: meritocratic, plutocratic and cultural. These types of elitism (and their counter-positions) are used as reference points throughout the book's analysis of successive educational themes. The conclusion leads to suggestions that bridge the worlds of elitism and egalitarianism worldwide. The book covers critical questions related to the sociology and philosophy of education with particular focus on contemporary disruptors to education such as the COVID-19 pandemic and protest movements for social justice. With an attempt to offer readers an objective overview, this book will be an excellent compendium for students, academics, and researchers of the sociology of education, education policy and comparative education. It will also be of interest to school leaders, university provosts and professionals working in curriculum design.

When a child has a health problem, parents want answers. But when a child has cerebral palsy, the answers don't come quickly. A diagnosis of this complex group of chronic conditions affecting movement and coordination is difficult to make and is typically delayed until the child is eighteen months old. Although the condition may be mild or severe, even general predictions about long-term prognosis seldom come before the child's second birthday. Written by a team of experts associated with the Cerebral Palsy Program at the Alfred I. duPont Hospital for Children, this authoritative resource provides parents and families with vital information that can help them cope with uncertainty. Thoroughly updated and revised to incorporate the latest medical advances, the second edition is a comprehensive guide to cerebral palsy. The book is organized into three parts. In the

first, the authors describe specific patterns of involvement (hemiplegia, diplegia, quadriplegia), explain the medical and psychosocial implications of these conditions, and tell parents how to be effective advocates for their child. In the second part, the authors provide a wealth of practical advice about caregiving from nutrition to mobility. Part three features an extensive alphabetically arranged encyclopedia that defines and describes medical terms and diagnoses, medical and surgical procedures, and orthopedic and other assistive devices. Also included are lists of resources and recommended reading.
