This book examines the role of the inspector within the context of a number of OECD member states and explores the ways in which the inspectors themselves interpret, implement and influence inspection practices and policy. Inspection policy can have various unintended consequences, some of which produce radical discrepancies between the policy intent and its implementation. A number of these discrepancies derive from the way in which the policy is articulated while others derive from the ways in which inspectors interpret and operationalise this policy. This implementation is coloured and conditioned by several factors, including the evidence on which inspectors base their judgements; what counts as evidence in different policy contexts; what counts as valid knowledge in inspection processes; the qualities needed by inspectors working in differing policy contexts and the identities that they adopt in order to successfully carry out their work. The book provides a valuable contribution to our understanding of the politics and practices which colour and shape the legitimacy and operational execution of inspection policy. The work is unique in its focus on the inspectors' role within the implementation of the inspection process— an element often overlooked in the literature. It also includes two chapters co-written by inspectors, offering unique insights into their life worlds and identities.

For over forty years in more than sixty countries, Raymond Baker has witnessed the free-market system operating illicitly and corruptly, with devastating consequences. In *Capitalism's Achilles Heel*, Baker takes readers on a fascinating journey through the global free-market system and reveals how dirty money, poverty, and inequality are inextricably intertwined. Readers will discover how small illicit transactions lead to massive illegalities and how staggering global income disparities are worsened by the illegalities that permeate international capitalism. Drawing on his experiences, Baker shows how Western banks and businesses use secret transactions and ignore laws while handling some \$1 trillion in illicit proceeds each year. He also illustrates how businesspeople, criminals, and kleptocrats perfect the same techniques to shift funds and how these tactics negatively affect individuals, institutions, and countries.

In recent years, education systems in more than 50 countries have shown an interest in obtaining information on what their students have learned as a result of their educational experiences. It seems likely that the number of countries interested in this sort of information will increase in the future. This book is intended to provide an introduction to individuals with an interest in assessing the learning outcomes of educational systems. In Chapter 1, "Nature and Uses of Educational Indicators," it considers the role of indicators in this process. A number of approaches to assessing learning outcomes in developed and developing countries are described, and systems of comparative international assessment are reviewed in chapter 2, "National and International Assessments." The question of whether existing information from public examination results can be used to provide information on learning outcomes for an education system is answered in the negative in chapter 3, "National Assessment and Public Examinations." chapter 4, "Components of a National Assessment," reviews the stages of a national assessment, and chapter 5, "Pitfalls of National Assessment: A Case Study," presents a case study of examples of poor practice in the conduct of national assessments. An appendix presents a national assessment checklist. (Contains 4 boxes, 6 tables, and 139 references.) (SLD)

This book presents selected case studies from the Arab world on the universities responses to the pandemic. This book will look in detail at the priorities of the higher education sector in the post-COVID-19 era and the changes that must be adopted by universities and governments. These changes will allow the higher education sector to emerge from the crisis and build short- and long-term resilience. The onset of the COVID-19 pandemic has induced sudden changes worldwide by setting a global lockdown that has impacted all industries and sectors, affecting our daily lives and forcing us to adapt to a new normal. This book is the first major account of how the pandemic has shaken universities and higher education institutions in the Arab world today and tomorrow. Crucially, it examines the responses of universities to COVID-19, highlights their current position, and addresses the negative and positive outcomes. Has this crisis become an adversity or an opportunity for higher education institutions? What are the pillars that will ensure the success of the Arab higher education sector post COVID-19?

The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises in many emerging market and developing economies. During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce the likelihood that the current debt wave will end in crisis and, if crises do take place, will alleviate their impact.
