Victorian Scientific
Naturalism examines the

secular creeds of the generations should be granted cultural authority, since their expertise of intellectuals who, in the wake of *The Origin of Species*, wrested cultural authority from the old Anglican establishment while installing themselves as a new professional scientific elite. These scientific naturalists—led by biologists, physicists, and mathematicians such as William Kingdon Clifford, Joseph Dalton Hooker, Thomas Henry Huxley, and John Tyndall—sought to persuade both the state and the public that scientists, not theologians,

gave them special insight into society, politics, and even ethics. In *Victorian Scientific Naturalism*, Gowan Dawson and Bernard Lightman bring together new essays by leading historians of science and literary critics that recall these scientific naturalists, in light of recent scholarship that has tended to sideline them, and that reevaluate their place in the broader landscape of nineteenth-century Britain. Ranging in topic from daring climbing expeditions in the

Alps to the maintenance of aristocratic protocols of conduct at Kew Gardens, these essays offer a series of new perspectives on Victorian scientific naturalism—as well as its subsequent incarnations in the early twentieth century—that together provide an innovative understanding of the movement centering on the issues of community, identity, and continuity. *Equivalence of Foreign Degrees* World Bank Publications Since the 1988 Education

Reform Act, our education system has undergone dramatic changes and this in turn has raised a number of controversial issues and questions. This reader brings together key articles, both recently published and specially commissioned, which address these issues and place them in context. Issues covered include: *the curriculum * teaching and learning *assessment *school effectiveness and improvement. Various themes run throughout the book include, the quest for quality

within a social context, the application of theory and research to practice, and the positive roles played by both teachers and students in adapting to recent change. Chemistry Education in the ICT Age United Nations Now fully updated in its fourth edition, Science Learning, Science Teaching offers an accessible, practical guide to creative classroom teaching and a comprehensive introduction to contemporary issues in science education. Aiming to encourage and assist professionals with the process of reflection in the science classroom, the new edition re-examines the latest advances in the

field and changes to the curriculum, and explores the use of mobile technology and coding, and its impact on ICT in science education. With extra tasks integrated throughout the book and a brand new chapter, ‘ Working scientifically ’, to help develop learners’ investigative skills, key topics include:

- The art and craft of science teaching.
- The science curriculum and science in the curriculum.
- Planning and managing learning.
- Inclusive science education.
- Laboratory safety in science learning and teaching.
- Language and numeracy in science teaching and learning.
- Computers and computing in science education.
- Citizenship and sustainability in

science education. Including points for reflection and useful information about further reading and recommended websites, Science Learning, Science Teaching is an essential source of support, guidance and inspiration for all students, teachers, mentors and those involved in science education wishing to reflect upon, improve and enrich their practice.

Making a Grade takes historiographic and sociological perspectives developed to understand large-scale scientific and technical systems and uses them to highlight the standardization that went into

standardized testing.

Making a Grade Cambridge University Press

In recent years, education systems in more than 50 countries have shown an interest in obtaining information on what their students have learned as a result of their educational experiences. It seems likely that the number of countries interested in this sort of information will increase in the future. This book is intended to provide an introduction to individuals with an interest in assessing the learning outcomes of educational systems. In Chapter 1, "Nature and Uses of Educational Indicators," it considers the role of indicators in this process. A number of approaches to assessing

learning outcomes in developed and developing countries are described, and systems of comparative international assessment are reviewed in chapter 2, "National and International Assessments." The question of whether existing information from public examination results can be used to provide information on learning outcomes for an education system is answered in the negative in chapter 3, "National Assessment and Public Examinations." chapter 4, "Components of a National Assessment," reviews the stages of a national assessment, and chapter 5, "Pitfalls of National Assessment: A Case Study," presents a case study of examples of poor practice in the conduct of national assessments.

An appendix presents a national assessment checklist. (Contains 4 boxes, 6 tables, and 139 references.) (SLD)

Cambridge BEC Preliminary 1 Cambridge University Press

The global economy has experienced four waves of rapid debt accumulation over the past 50 years. The first three debt waves ended with financial crises

in many emerging market and developing economies. During the current wave, which started in 2010, the increase in debt in these economies has already been larger, faster, and broader-based than in the previous three waves. Current low interest rates mitigate some of the risks associated with high debt. However, emerging market and developing economies are also confronted by weak growth prospects, mounting vulnerabilities, and elevated global risks. A menu of policy options is available to reduce the likelihood that the current debt wave will end in crisis and, if

crises do take place, will alleviate their impact.

Equity Issues in Public Examinations in Developing Countries

Test developers need to provide a clear explication of the language ability constructs that underpin the tests they offer in the public domain; such an explication is essential for supporting claims about the validity --- or usefulness --- of tests and test scores. This edited volume develops a theoretical framework for validating tests of second language speaking ability. The framework is then applied through an examination of the tasks in

Cambridge ESOL speaking tests from a number of different validity perspectives that reflect the socio-cognitive nature of any assessment event. The chapter authors show how an understanding and analysis of the framework and its components can assist test developers to operationalise their tests more effectively, especially in relation to the key criteria that differentiate one proficiency level from another. The volume is a rich source of information on all aspects of examining speaking ability. As such, it will be of considerable interest to examination boards who wish to validate their own speaking tests in a systematic and coherent manner, as well as to academic researchers and graduate students in

the field of language assessment more generally. This is a companion volume to the previously published titles Examining Writing and Examining Reading.

Indians Overseas, the Mauritian Experience John Wiley & Sons

For over forty years in more than sixty countries, Raymond Baker has witnessed the free-market system operating illicitly and corruptly, with devastating consequences. In *Capitalism's Achilles Heel*, Baker takes readers on a fascinating journey through the global free-market system and reveals how dirty money, poverty, and inequality are inextricably intertwined. Readers will discover how small illicit transactions lead to

massive illegalities and how staggering global income disparities are worsened by the illegalities that permeate international capitalism. Drawing on his experiences, Baker shows how Western banks and businesses use secret transactions and ignore laws while handling some \$1 trillion in illicit proceeds each year. He also illustrates how businesspeople, criminals, and kleptocrats perfect the same techniques to shift funds and how these tactics negatively affect individuals, institutions, and countries.
